Matheron,Q. Menet,2021-06-21 We solve a number of questions pertaining to the dynamics of linear operators on Hilbert spaces sometimes by using Baire category arguments and sometimes by constructing explicit examples In particular we prove the following results i A typical hypercyclic operator is not topologically mixing has no eigen values and admits no non trivial invariant measure but is densely distri butionally chaotic ii A typical upper triangular operator with coe cients of modulus 1 on the diagonal is ergodic in the Gaussian sense whereas a typical operator of the form diagonal with coe cients of modulus 1 on the diagonal plus backward unilateral weighted shift is ergodic but has only countably many unimodular eigenvalues in particular it is ergodic but not ergodic in the Gaussian sense iii There exist Hilbert space operators which are chaotic and U frequently hypercyclic but not frequently hypercyclic Hilbert space operators which are chaotic and frequently hypercyclic but not ergodic and Hilbert space operators which are chaotic and topologically mixing but not U frequently hypercyclic We complement our results by investigating the descriptive complexity of some natural classes of operators de ned by dynamical properties **Applied Mechanics Reviews** ,1969 *Catalog of Educational Captioned Films/videos for the Deaf* ,1988 **Memorandum** ,1961 **Review of Chemical Agent Secondary Waste Disposal and Regulatory Requirements** National Research Council,Division on Engineering and Physical Sciences,Board on Army Science and Technology,Committee on Review of Chemical Agent Secondary Waste Disposal and Regulatory Requirements,2007-08-13 Under the direction of the U S Army s Chemical Materials Agency CMA and mandated by Congress the nation is destroying its chemical weapons stockpile Large quantities of secondary waste are being generated in the process and managing these wastes safely and effectively is a critical part of CMA s weapons disposal program To assist the CMA asked the NRC to
