*An Improved Lightweight Privacy Preserving Authentication Scheme for SIP-Based-VoIP Using Smart Card* Saeed Ullah Jan, 2017-03-09 In the past few years secure information sharing became very popular in the area of immigration military applications healthcare education foreign affairs etc As secure communication utilizes both wireless and wired communication mechanizations for exchanging sensitive information security and privacy of the information exchange cannot be easily compromised To moderate the security integrity authenticity and privacy issues related to information exchange numerous authentication mechanisms have been recommended by different researchers in the literature in recent times but these are vulnerable to prospective security flaws such as masquerade insider replay impersonation password guessing server spoofing denial of service attacks and in addition have failed to deliver mutual authentication In the past few years we have also witnessed a balanced growth in the acceptance of VoIP Voice over IP facilities because the numerous Web and VoIP applications depend on huge and extremely distributed infrastructures to process requests from millions of users in an appropriate manner Due to their extraordinary desires these large scale internet applications have frequently surrendered security for other objectives such as performance scalability and availability As a result these applications have characteristically favored weaker but well organized security mechanisms in their foundations Session Initiation Protocol SIP is an application and presentation layers signaling protocol that initiates modifies and terminates IP based multimedia sessions Implementing SIP for secure communication has been a topic of study for the past decade and several proposals are available in the research domain However security aspects are not addressed in most of these proposals because SIP is exposed to several threats and faces security issues at these layers Probes for SIP Session Initiation Protocol servers have

been conveyed for many years To gather more details about these activities the author has designed a scheme for SIP servers in a network and composed data about some popular attacks Furthermore he explains his interpretations and guidance on how to prevent these attacks from being successful Biometrics a new field of research has also been dealt with in this research by means of a three factor authentication scheme in which one factor is biometrics *Advanced Intelligent Computing Technology and Applications* De-Shuang Huang,Chuanlei Zhang,Jiayang Guo,2024-07-30 This 13 volume set LNCS 14862 14874 constitutes in conjunction with the 6 volume set LNAI 14875 14880 and the two volume set LNBI 14881 14882 the refereed proceedings of the 20th International Conference on Intelligent Computing ICIC 2024 held in Tianjin China during August 5 8 2024 The total of 863 regular papers were carefully reviewed and selected from 2189 submissions This year the conference concentrated mainly on the theories and methodologies as well as the emerging applications of intelligent computing Its aim was to unify the picture of contemporary intelligent computing techniques as an integral concept that highlights the trends in advanced computational intelligence and bridges theoretical research with applications Therefore the theme for this conference was Advanced Intelligent Computing Technology and Applications Papers that focused on this theme were solicited addressing theories methodologies and applications in science and technology
