

Newton's 1<sup>st</sup> Law - the law of inertia

An object with no net force acting on it remains at rest or in uniform.

- Objects at rest tend to stay at rest.
- Objects in motion tend to move in a straight line at constant speed.

Inertia - A property of matter which resists changes in motion.

The best measure of an object's inertia is its mass.

Force - A push or pull.

Net forces cause the motion of an object to change.

Examples of Newton's 1<sup>st</sup> Law in Action:

When you're in a car brake  
when you're turning in a car.

In the egg demonstration:

Why does the tray fly across the table? Force was applied toward the tray

Why do the cardboard cylinders go with it? The friction force

Why do the eggs drop straight down into the water? is acting like a glue.  
The eggs drop straight down because of gravity.

Physics Challenge: Why doesn't a car in motion on a flat road stay in motion?

Friction forces, and air resistance.

Examples of Accelerated Motion:

Speeding up : slowing down : Starting :  
Changing direction : Stopping : moving in a circle

Inertia resists acceleration.

A net force causes acceleration.

Newton's 2<sup>nd</sup> Law - the law of acceleration

When a net force is applied to an object the object will accelerate in the direction of that force.

Probability in Physics Andy Lawrence, 2019-09-01 This textbook presents an introduction to the use of probability in physics treating introductory ideas of both statistical physics and of statistical inference as well the importance of probability in information theory quantum mechanics and stochastic processes in a unified manner The book also presents a harmonised view of frequentist and Bayesian approaches to inference emphasising their complementary value The aim is to steer a middle course between the cookbook style and an overly dry mathematical statistics style The treatment is driven by real physics examples throughout but developed with a level of mathematical clarity and rigour appropriate to mid career physics undergraduates Exercises and solutions are included      Essential SQA Exam Practice: National 5 Physics Questions and Papers Paul Van der Boon, 2019-12-02 Exam board SQA Level National 5 Subject Physics First teaching September 2017 First exam Summer 2018 Practice makes permanent Feel confident and prepared for the SQA National 5 Physics exam with this two in one book containing practice questions for every question type and topic plus two full practice papers all written by an experienced examiner Choose to revise by question type or topic A simple grid enables you to pick particular question styles or course areas that you want to focus on with answers provided at the back of the book Understand what the examiner is looking for Clear guidance on how to answer each question type is followed by plenty of questions so you can put the advice into practice building essential exam skills Remember more in your exam Repeated and extended practice will give you a secure knowledge of the key areas of the course dynamics space electricity properties of matter waves radiation Familiarise yourself with the exam paper Both practice papers mirror the language and layout of the real SQA papers complete them in timed exam style conditions to increase your confidence before the exams Find out how to achieve a better grade Answers to the practice papers have commentaries for each question with tips on writing successful answers and avoiding common mistakes Fully up to date with SQA s requirements The questions mark schemes and guidance in this practice book match the requirements of the revised SQA National 5 Physics specification for examination from 2018 onwards      **Resources in Education** ,1997-04      Educational Times ,1899      **The Athenaeum** ,1884      **Augustine's Invention of the Inner Self : The Legacy of a Christian Platonist** St. David's Phillip Cary Director of the Philosophy Program Eastern College, Pennsylvania, 2000-06-12 In this book Phillip Cary argues that Augustine invented the concept of the self as a private inner space a space into which one can enter and in which one can find God Although it has often been suggested that Augustine in some way inaugurated the Western tradition of inwardness this is the first study to pinpoint what was new about Augustine s philosophy of inwardness and situate it within a narrative of his intellectual development and his relationship to the Platonist tradition Augustine invents the inner self Cary argues in order to solve a particular conceptual problem Augustine is attracted to the Neoplatonist inward turn which located God within the soul yet remains loyal to the orthodox Catholic teaching that the soul is not divine He combines the two emphases by urging us to turn in then up to enter the inner world of

the self before gazing at the divine Light above the human mind Cary situates Augustine's idea of the self historically in both the Platonist and the Christian traditions The concept of private inner self he shows is a development within the history of the Platonist concept of intelligibility or intellectual vision which establishes a kind of kinship between the human intellect and the divine things it sees Though not the only Platonist in the Christian tradition Augustine stands out for his devotion to this concept of intelligibility and his willingness to apply it even to God This leads him to downplay the doctrine that God is incomprehensible as he is convinced that it is natural for the mind's eye when cleansed of sin to see and understand God In describing Augustine's invention of the inner self Cary's fascinating book sheds new light on Augustine's life and thought and shows how Augustine's position developed into the more orthodox Augustine we know from his later writings **New York Herald Tribune Books** ,1927 English Mechanic and World of Science ,1878 **"Hailing frequencies open"** Thomas D. **Centering Humanism in STEM Education** Bryan Dewsbury, Susannah McGowan, Sheila S. Jaswal, Desiree Forsythe, 2024-09-24 Research demonstrates that STEM disciplines perpetuate a history of exclusion particularly for students with marginalized identities This poses problems particularly when science permeates every aspect of contemporary American life Institutions repeated failures to disrupt systemic oppression in STEM has led to a mostly white cisgender and male scientific workforce replete with implicit and or explicit biases Education holds one pathway to disrupt systemic linkages of STEM oppression from society to the classroom Maintaining views on science as inherently objective isolates it from the world in which it is performed STEM education must move beyond the transactional approaches to transformative environments manifesting respect for students social and educational capital We must create a STEM environment in which students with marginalized identities feel respected listened to and valued We must assist students in understanding how their positionality privilege and power both historically and currently impacts their meaning making and understanding of STEM
