Fauman, 2008-08-13 For many psychiatrists and other mental health professionals the clinical review is the most burdensome and disagreeable part of managed care In that review they are asked by a representative of the managed care company to justify their patient's need for care and to defend the treatment they are providing Clinicians usually feel at a disadvantage in these discussions because they are never quite sure what information the reviewer needs to approve the patient's care This does not have to be the case The goal of this book is to teach psychiatrists mental health professionals and administrators how reviewers think and how to conceptualize present and document clinical care in a manner that greatly increases the likelihood that reviewers will approve their request for care Beginning with five questions that must be answered in every managed care review the author

discusses the following key topics and many others Presenting your case to a reviewer How to effectively present requests for inpatient partial hospital and substance abuse care and avoid common mistakes that decrease the likelihood that your request will be approved How to answer the four clinical questions that must be addressed in every review even if they are not asked by the reviewer Negotiating with the reviewer How to negotiate with a reviewer who is reluctant to approve the care you request Writing effective notes How to write effective clinical notes in the patient s record that substantiate your request for care and increase the likelihood that it will be approved Dealing with unethical reviewers How to identify and take action against unethical reviewers and managed care companies that are insensitive to your patient s clinical needs Appealing denials of care How to appeal denials of care when you do not agree with the reviewer s decision These and many other important issues are highlighted in brief vignettes illustrating a clinician s presentation of a patient s case and a typical reviewer s comments This tremendously useful volume will be welcomed by every mental health care practitioner who must negotiate the current managed care landscape

Turkat, 2013-12-14 One of the most frequent requests I receive from graduate students is for references on how to formulate a complex clinical

case Typically after reading the recommended materials the student returns to request more detailed accounts of how clinicians think about particular cases The general lack of such materials in the behavior therapy literature led to the formation of the present volume Throughout much of the behavior therapy literature one gets the impression that most cases seen present circumscribed and straight forward psychological problems In my experience such cases are rare Accordingly the present volume was designed to cover more complex problems such as sociopathy and paranoid personality These disorders are rarely discussed in the behavior therapy literature but nonetheless seem to appear regularly in clinical settings The cases presented in this book are descriptions of patients seen clinically by the editor or by the contributors Work on this text began while I was a faculty member at Vanderbilt University and took several years to complete As the contributors would attest the task I set out for them was atypical and often difficult The complexities involved in articulating how one conceptualizes a case are numerous and may help to explain why there are so few sources available on case formulation The fact that our current state of knowledge in psychopathology is rather limited further exacerbates the problem
