Maintenance Monthly, 1969 The Preventive Maintenance Monthly is an official publication of the Army providing information for all soldiers assigned to combat and combat duties The magazine covers issues concerning maintenance maintenance procedures and supply problems Einstein's Jury Jeffrey Crelinsten, 2016-05-31 Einstein's Jury is the dramatic story of how astronomers in Germany England and America competed to test Einstein's developing theory of relativity Weaving a rich narrative based on extensive archival research Jeffrey Crelinsten shows how these early scientific debates shaped cultural attitudes we hold today The book examines Einstein's theory of general relativity through the eyes of astronomers many of whom were not convinced of the legitimacy of Einstein's startling breakthrough These were individuals with international reputations to uphold and benefactors and shareholders to please yet few of them understood the new theory coming from the pen of Germany's up and coming theoretical physicist Albert Einstein Some tried to test his theory early in its development but got no results Others through toil and hardship great expense and perseverance concluded that it was wrong A tale of international competition and intrigue Einstein's Jury brims with detail gleaned from Crelinsten's far reaching inquiry into the history and development of relativity Crelinsten concludes that the well known British eclipse expedition of 1919 that made Einstein famous had less to do with the scientific acceptance of his theory than with his burgeoning public fame It was not until the 1920s when the center of gravity of astronomy and physics shifted from Europe to America that the work of prestigious American observatories legitimized Einstein's work As Crelinsten so expertly shows the glow that now surrounds the famous scientist had its beginnings in these early debates among professional scientists working in the glare of the public spotlight *Acoustic Noise and Vibration Studies at Cape Canaveral Missile Test Annex*

Andres, Olivier Darbin, Marcelo Merello, 2017-10-31 The basal ganglia constitute a group of subcortical structures highly interconnected among themselves as well as with the cerebral cortex thalamus and other brain areas These nuclei play a central role in the control of voluntary movement and their specific pathology comprises the group of diseases known as movement disorders including Parkinson's disease Huntington's disease dystonia and Gilles de la Tourette syndrome among others Additionally the presence of a number of circuits within the basal ganglia related to non motor functions has been acknowledged Currently the basal ganglia are thought to participate in cognitive limbic and learning functions Moreover disorders related to the basal ganglia are known to involve a number of complex non motor symptoms and syndromes e g

compulsive and addictive behavior In the light of this evidence it is becoming clear that our knowledge about the basal ganglia needs to be revised and that new pathophysiological models of movement disorders are needed In this context the study of the pathophysiology of the basal ganglia and the treatment of their pathology is becoming increasingly interdisciplinary Nowadays an appropriate approach to the study of these problems must necessarily involve the use of complex mathematical modeling computer simulations basic research ranging from biomolecular studies to animal experimentation and clinical research This research topic aims to bring together the most recent advances related to the pathophysiology of the basal ganglia and movement disorders
