Triennial Review of the National Nanotechnology Initiative National Research Council, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Committee on Triennial Review of the National Nanotechnology Initiative: Phase II, 2014-01-20 The National Nanotechnology Initiative NNI is a multiagency multidisciplinary federal initiative comprising a collection of research programs and other activities funded by the participating agencies and linked by the vision of a future in which the ability to understand and control matter at the nanoscale leads to a revolution in technology and industry that benefits society As first stated in the 2004 NNI strategic plan the participating agencies intend to make progress in realizing that vision by working toward four goals Planning coordination and management of the NNI are carried out by the interagency Nanoscale Science Engineering and Technology NSET Subcommittee of the National Science and Technology Council NSTC Committee on Technology CoT with support from the National Nanotechnology Coordination Office NNCO Triennial Review of the National Nanotechnology Initiative is the latest National Research Council review of the NNI an assessment called for by the 21st Century Nanotechnology Research and Development Act of 2003 The overall objective of the review is to make recommendations to the NSET Subcommittee and the NNCO that will improve the NNI's value for basic and applied research and for development of applications in nanotechnology that will provide economic societal and national security benefits to the United States In its assessment the committee found it important to understand in some detail and to describe in its report the NNI's structure and organization how the NNI fits within the larger federal research enterprise as well as how it can and should be organized for management purposes and the initiative's various stakeholders and their roles with respect to research Because technology transfer one of the four NNI goals is dependent on management and coordination the committee chose to address the topic of technology transfer last following its discussion of definitions of success and metrics for assessing progress toward achieving the four goals and management and coordination Addressing its tasks in this order would the committee hoped better reflect the logic of its approach to review of the NNI Triennial Review of the National Nanotechnology Initiative also provides concluding remarks in the last chapter

NASA Technical Memorandum ,1976 *Maritime Technology and Engineering III* Carlos

Guedes Soares, T.A. Santos, 2016-12-01 Maritime Technology and Engineering 3 is a collection of papers presented at the 3rd International Conference on Maritime Technology and Engineering MARTECH 2016 Lisbon Portugal 4-6 July 2016. The MARTECH Conferences series evolved from biannual national conferences in Portugal, thus reflecting the internationalization of the maritime sector. The keynote lectures and the papers making up nearly 150 contributions came from an international group of authors focused on different subjects in a variety of fields: Maritime Transportation, Energy Efficiency, Ships in Ports, Ship Hydrodynamics, Ship Structures, Ship Design, Ship Machinery, Shipyard Technology, Safety, Reliability, Fisheries, Oil/Gas, Marine Environment, Renewable Energy, and Coastal Structures. This book will appeal to academics, engineers, and professionals interested or involved in these fields.

Spacecraft Dynamics and Control Enrico Canuto, Carlo Novara, Donato Carlucci, Carlos Perez-Montenegro, Luca Massotti, 2018-03-08. Spacecraft Dynamics and Control: The Embedded Model Control Approach provides a uniform and systematic way of approaching space engineering control problems from the standpoint of model-based control using state-space equations as the key paradigm for simulation, design, and implementation. The book introduces the Embedded Model Control methodology for the design and implementation of attitude and orbit control systems. The logic architecture is organized around the embedded model of the spacecraft and its surrounding environment. The model is compelled to include disturbance dynamics as a repository of the uncertainty that the control law must reject to meet attitude and orbit requirements within the uncertainty class. The source of the real-time uncertainty estimation/prediction is the model error signal as it encodes the residual discrepancies between spacecraft measurements and model output. The embedded model and the uncertainty estimation/feedback noise estimator in the book constitute the state predictor feeding the control law. Asymptotic pole placement exploiting the asymptotes of closed-loop transfer functions is the way to design and tune feedback loops around the embedded model state predictor control law reference generator. The design versus the uncertainty class is driven by analytic stability and performance inequalities. The method is applied to several attitude and orbit control problems. The book begins with an extensive introduction to attitude geometry and algebra and ends with the core themes: state-space dynamics and Embedded Model Control Fundamentals of orbit attitude and environment dynamics are treated, giving emphasis to state-space formulation, disturbance dynamics, state feedback and prediction, closed-loop stability. Sensors and actuators are treated, giving emphasis to their dynamics and modelling of measurement errors. Numerical tables are included and their data employed for numerical simulations. Orbit and attitude control problems of the European GOCE mission are the inspiration of numerical exercises and simulations. The suite of the attitude control modes of a GOCE-like mission is designed and simulated around the so-called mission state predictor. Solved and unsolved exercises are included within the text and not separated at the end of chapters for better understanding, training, and application. Simulated results and their graphical plots are developed through MATLAB/Simulink code. *The BRICS Studies* Xu Xijun, 2020-05-14. Given their immense potential for development and representation of a new

international political and economic order the BRICS countries have become a strong nascent force on the global stage. However, as overall economic growth continues to slow down and the geopolitical situation becomes more complex, the BRICS countries are facing a series of new challenges that require further development in the way they cooperate with one another. This volume offers a panoramic view of cooperation between the BRICS countries in the light of these new challenges. The editors reveal that policy coordination has been strengthened, bringing into play complementary advantages as viable ways for promoting robust, sustainable and balanced growth in the world economy. They argue that the experience gained and lessons learned in the development of and cooperation between the BRICS countries has offered a positive role model for cooperation between other countries as well as providing valuable lessons for research in international politics. Students and scholars in international relations and politics will benefit from this volume.

The Rocket Lab Michael G. Smith, 2023-05-15
The Rocket Lab Maurice Zucrow, Purdue University and America's Race to Space focuses on the golden era of space exploration between 1946 and 1966, specifically the life and times of Purdue University's Dr. Maurice J. Zucrow, a pioneering teacher and researcher in aerospace engineering. Zucrow taught America's first university course in jet and rocket propulsion, wrote the field's first textbook, and established the country's first educational Rocket Lab. He was part of a small circle of innovators who transformed Purdue into the country's largest engineering university, which became a cradle of astronauts. Taking a chronological and thematic approach, The Rocket Lab weaves between the local and national, drawing in rival universities, especially Harvard, MIT, Princeton, and Caltech. Also covered is Zucrow's role in the national project system of research and development through World War II and the Cold War. At Aerojet, he was one of the country's original project engineers, dedicated to scientific technical expertise and the stepwise approach. He made vanguard power plant contributions to the Northrop Flying Wing, as well as the Corporal, Nike, and Atlas missiles, among others. Zucrow's work in propulsion helped to improve the country's arsenal of ballistic missiles and space launchers, and as a teacher, he educated the first generation of aerospace engineers. This book elevates Zucrow and the central role he played in getting the United States to space.

Ethics in the University James G. Speight, 2016-08-26
It is the continuous reports of unethical behavior in the form of data manipulation, cheating, plagiarism, and other forms of unacceptable behavior that draw attention to the issues of misconduct. The causes of misconduct are manifold, whether it is the need to advance in a chosen discipline or to compete successfully for and obtain research funding. Disappointingly, individuals who are oriented to any form of dishonesty are individuals who had previously displayed little or no consideration for the feelings of others and are therefore more interested in themselves at the expense of the students and others recognizing them by any means necessary. This ground-breaking and honest examination of ethics in the university setting is unabashed in its descriptions of misconduct in the academic world. The text is well-furnished with numerous citations that point to academic misconduct, and the final chapter deals with the means by which misconduct can be mitigated, a strong reminder to everyone in the academic community that

above board conduct must be part of our overall message of learning and part of the whole point of education in the first place A must have for academics and non academics alike this text is the second in a series of books on ethics by James G Speight and it is useful to anyone in any industry who is interested in ethical behavior and how to navigate the sometimes murky depths of our professional lives *Progressive Engineering Practices in Marine Resource Management* Zlateva, Ivelina, Raykov, Violin, Nikolov, Nikola, 2015-04-30 There is overwhelming evidence that marine resources are being overexploited throughout the world In an effort to conserve the natural resources of the world s oceans new methods technologies and practices in fishery and marine resource management must be implemented *Progressive Engineering Practices in Marine Resource Management* combines scientific ecological and engineering approaches involved in the sustainable management of natural resources Featuring coverage on key topics relating to environmental management maritime spatial planning sustainable fisheries and waste water treatment this publication is a critical reference source for fishery associations scientists environmental management authorities and water management directorates interested in emerging technologies and innovative resource management techniques **Building capability in the Senior Civil Service to meet today's challenges** Great Britain: National Audit Office, 2013-06-19 The Government now accepts the urgent need for a leadership group that can think across departmental boundaries and lead change but there is still a long way to go to change the long standing culture of the Senior Civil Service The NAO watchdog welcomed the ambition of the Civil Service Reform Plan and emphasised the urgent need to make progress given that the plan underpinned the Government s chances of achieving further efficiency savings At present there are significant skills shortages particularly in the areas of commerce project management digital delivery and change leadership In December 2012 only four out of 15 Permanent Secretaries at major delivery departments had significant operational delivery and commercial experience The 24 professional networks in the civil service lack influence across departmental silos and may not be the right groupings to meet the needs of the modern service The Government intends to open up the service with more internal transfers and free flow of skills to and from the private sector and build on an approach already in place for the top 200 But the proportion of new recruits from the private sector fell in 2009 10 as departments cut spending and has yet to recover Promotion to the Senior Civil Service is becoming so financially unattractive as to put off talented people The NAO warns that the latest moves to increase pay flexibility and offer incentives for business critical roles may not be enough to recruit motivate and retain the right people **A Guide to Asian High Yield Bonds** Florian H. Genetic Resources as Natural Information Manuel Ruiz Muller, 2015-09-16 Demonstrating the shortcomings of current policy and legal approaches to access and benefit sharing ABS in the Convention on Biological Diversity CBD this book recognizes that genetic resources are widely distributed across countries and that bilateral contracts undermine fairness and equity The book offers a practical and feasible regulatory alternative to ensure the goal of fairness and equity is effectively and efficiently met Through a legal analysis that also incorporates historic economic and sociological perspectives the book argues that genetic resources are not tangible resources but information It shows that the existing preference for bilateralism and contracts reflects resistance on the part of many of the stakeholders involved in the CBD process to recognize them as such ABS issues respond very well to the economics of information yet as the author explains these have been either sidelined or overlooked At a time when the Nagoya Protocol on ABS has renewed interest in feasible policy options the author provides a constructive and provocative critique The institutional policy and regulatory framework constitute bounded openness under which fairness and equity emerge

The Ethics of Nanotechnology, Geoengineering, and Clean Energy Andrew Maynard, Jack Stilgoe, 2020-07-26 Nanotechnology clean technology and geoengineering span the scale of human ingenuity from the imperceptibly small to the unimaginably large Yet they are united by a commonality of ethics that permeates how and why they are developed and how the resulting consequences are managed The articles in this volume provide a comprehensive account of current thinking around the ethics of development and use within each of the technological domains and addresses challenges and

opportunities that cut across all three In particular the collection provides unique insights into the ethics of noumenal technologies technologies that are impossible to see or detect or conceive of with human senses or conventional tools This collection will be of relevance to anyone who is actively involved with ensuring the responsible and sustainable development of nanotechnology geoenvironmental engineering or clean technology

Japan's Engineering Ethics and Western Culture Natsume Kenichi, 2021-07-29 Given that engineering significantly affects modern society ensuring its reliability is essential How then should society implement engineering ethics to ensure its reliability Can we expect engineering ethics to be nurtured naturally in the practice of engineering communities If not should the subject be compulsory in educational programs Japan is among the most advanced countries with respect to engineering however it was not until the end of the 1990s that current engineering ethics education was introduced into Japanese engineering education programs While economic globalization played a significant role in promoting this introduction expectations of Western individualistic ethics and a hesitancy toward a foreign culture laid the foundation Japan's Engineering Ethics and Western Culture Social Status Democracy and Economic Globalization examines the broad historical process of developing engineering ethics from the late

nineteenth century to the twentieth century Even though the process was rooted in Japan s original culture and influenced by the ideologies of respective periods such as nationalism and democracy it consistently acknowledged trends from the United States and other Western countries Natsume Kenichi discusses this history from a comprehensive perspective including not only engineering education but also science technology industry and higher education policies as well as various issues in science technology and society STS studies
