Mathematics And Its Teaching In The Southern Americas: With An Introduction By Ubiratan D'ambrosio Hector Rosario,Bruce R Vogeli,Patrick Scott,2014-09-26 This anthology presents a comprehensive review of mathematics and its teaching in the following nations in South America Central America and the Caribbean Argentina Bolivia Brazil Chile Colombia Costa Rica Cuba Guyana Haiti Honduras Mexico Panama Paraguay Peru Puerto Rico Trinidad and Tobago and Venezuela The last summary of mathematics education encompassing countries from the Southern Americas appeared in 1966 Progress in the field during five decades has remained unexamined until now *Professional Development of Mathematics Teachers* Berinderjeet Kaur,Oh Nam Kwon,Yew Hoong Leong,2016-11-14 This book offers a counterpart to the extensive corpus of literature available on the same topic from a Western perspective It showcases innovative approaches to professional development of mathematics teachers in Asian countries and reports on both empirical and expository studies of teachers professional development in these countries It provides scholars from non English speaking and under represented Asian countries the opportunity to engage in discourse with other scholars in the field and is the first book to present substantial contributions from scholars in Asia on the professional development of mathematics teachers in their respective countries It includes perspectives that shed valuable light on how the approaches pursued in Asian countries resemble or differ from those in the West

Formality of the Little \mathbb{A}^1 -disks Operad Pascal Lambrechts, Ismar Volić,2014-06-05 The little disks operad along with its variants is an important tool in homotopy theory It is defined in terms of configurations of disjoint dimensional disks inside the standard unit disk in \mathbb{C} and it was initially conceived for detecting and understanding fold loop spaces Its many uses now stretch across a variety of disciplines including topology algebra and mathematical physics In this paper the authors develop the details of Kontsevich's proof of the formality of little disks operad over the field of real numbers More precisely one can consider the singular chains on as well as the singular homology of These two objects are operads in the category of chain complexes The formality then states that there is a zig zag of quasi isomorphisms connecting these two operads The formality also in some sense holds in the category of commutative differential graded algebras The authors additionally prove a relative version of the formality for the inclusion of the little disks operad in the little disks operad when

A Vector Field Method on the Distorted Fourier Side and Decay for Wave Equations with Potentials Roland Donniger,Joachim Krieger,2016-04-26 The authors study the Cauchy problem for the one dimensional wave equation $\partial_t^2 u + \partial_x^2 u = V(x)u$ The potential V is assumed to be smooth with asymptotic behavior $V(x) \sim |x|^{-2}$ as $|x| \rightarrow \infty$ They derive dispersive estimates energy estimates and estimates involving the scaling vector field $t\partial_t + x\partial_x$ where the latter are obtained by employing a vector field method on the distorted Fourier side In addition they prove local energy decay estimates Their results have immediate applications in the context of geometric evolution problems The

Irreducible Geometric Subgroups of Classical Algebraic Groups Timothy C. Burness,,Soumaïa Ghandour,Donna M. Testerman,2016-01-25 Let G be a simple classical algebraic group over an algebraically closed field of characteristic p with natural module V . Let H be a closed subgroup of G and let ρ be a non trivial irreducible tensor indecomposable restricted rational module such that the restriction of ρ to H is irreducible. In this paper the authors classify the triples (G, H, ρ) where H is a disconnected maximal positive dimensional closed subgroup of G preserving a natural geometric structure on V . *On Sudakov's Type Decomposition of Transference Plans with Norm Costs* Stefano Bianchini,Sara Daneri,2018-02-23 The authors consider the original strategy proposed by Sudakov for solving the Monge transportation problem with norm cost with probability measures μ, ν in \mathbb{R}^n and absolutely continuous w.r.t. \mathcal{H}^n . The key idea in this approach is to decompose via disintegration of measures the Kantorovich optimal transportation problem into a family of transportation problems in \mathbb{R}^k where $k < n$ are disjoint regions such that the construction of an optimal map is simpler than in the original problem and then to obtain by piecing together the maps. When the norm is strictly convex the sets are a family of dimensional segments determined by the Kantorovich potential called optimal rays while the existence of the map is straightforward provided one can show that the disintegration of μ, ν and thus of γ on such segments is absolutely continuous w.r.t. the dimensional Hausdorff measure. When the norm is not strictly convex the main problems in this kind of approach are two: first to identify a suitable family of regions on which the transport problem decomposes into simpler ones and then to prove the existence of optimal maps. In this paper the authors show how these difficulties can be overcome and that the original idea of Sudakov can be successfully implemented. The results yield a complete characterization of the Kantorovich optimal transportation problem whose straightforward corollary is the solution of the Monge problem in each set and then in \mathbb{R}^n . The strategy is sufficiently powerful to be applied to other optimal transportation problems.

Curvature: A Variational Approach A. Agrachev,D. Barilari,L. Rizzi,2019-01-08 The curvature discussed in this paper is a far reaching generalization of the Riemannian sectional curvature. The authors give a unified definition of curvature which applies to a wide class of geometric structures whose geodesics arise from optimal control problems including Riemannian, sub Riemannian, Finsler and sub Finsler spaces. Special attention is paid to the sub Riemannian or Carnot-Carathéodory metric spaces. The authors' construction of curvature is direct and naive and similar to the original approach of Riemann. In particular they extract geometric invariants from the asymptotics of the cost of optimal control problems. Surprisingly it works in a very general setting and in particular for all sub Riemannian spaces. [Analyzing the Role of Citizen Science in Modern Research](#) Ceccaroni, Luigi,Piera, Jaume,2016-10-25 As the need for sustainable development practices around the world continues to grow it has become imperative for citizens to become actively engaged

in the global transition By evaluating data collected from various global programs researchers are able to identify strategies and challenges in implementing civic engagement initiatives Analyzing the Role of Citizen Science in Modern Research focuses on analyzing data on current initiatives and best practices in citizen engagement and education programs across various disciplines Highlighting emergent research and application techniques within citizen science initiatives this publication appeals to academicians researchers policy makers government officials technology developers advanced level students and program developers interested in launching or improving citizen science programs across the globe

Descent Construction for GSpin Groups Joseph Hundley,Eitan Sayag,2016-09-06 In this paper the authors provide an extension of the theory of descent of Ginzburg Rallis Soudry to the context of essentially self dual representations that is representations which are isomorphic to the twist of their own contragredient by some Hecke character The authors theory supplements the recent work of Asgari Shahidi on the functorial lift from split and quasisplit forms of GSpin_{2n} to GL_{2n}

Exotic Cluster Structures on SL_n : The Cremmer-Gervais Case M. Gekhtman,M. Shapiro,A. Vainshtein,2017-02-20 This is the second paper in the series of papers dedicated to the study of natural cluster structures in the rings of regular functions on simple complex Lie groups and Poisson Lie structures compatible with these cluster structures According to our main conjecture each class in the Belavin Drinfeld classification of Poisson Lie structures corresponds to a cluster structure in The authors have shown before that this conjecture holds for any in the case of the standard Poisson Lie structure and for all Belavin Drinfeld classes in In this paper the authors establish it for the Cremmer Gervais Poisson Lie structure on which is the least similar to the standard one

Mayor Michael Bloomberg Lynne A. Weikart,2021-09-15 In Mayor Michael Bloomberg Lynne A Weikart dives into the mayoralty of Michael Bloomberg offering an incisive analysis of Bloomberg s policies during his 2002 2014 tenure as mayor of New York and highlighting his impact on New York City politics Michael Bloomberg became mayor of New York just four months after the 9 11 terrorist destruction of the World Trade Center and he lead the rebuilding of a physically and emotionally devastated city so well that within two years the city had budget surpluses Weikart reveals how state and federal governments constrained Bloomberg s efforts to set municipal policy and implement his strategic goals in the areas of homelessness low income housing poverty education and crime External powers of state and federal governments are strong currents and Bloomberg s navigation of these currents often determined the outcome of his efforts Weikart evaluates Michael Bloomberg s mayoral successes and failures in the face of various challenges externally the constraints of state government and mandates imposed by federal and state courts and internally the impasse between labor unions and Bloomberg Weikart identifies and explores both the self created restrictions of Mayor Bloomberg s own management style and the courage of Mike Bloomberg s leadership

Applications of Polyfold Theory I: The Polyfolds of Gromov-Witten Theory H. Hofer,K. Wysocki,E. Zehnder,2017-07-13 In this paper the authors start with the construction of the symplectic field theory SFT As a general theory of symplectic invariants SFT has been outlined in Introduction to

symplectic field theory 2000 by Y Eliashberg A Givental and H Hofer who have predicted its formal properties The actual construction of SFT is a hard analytical problem which will be overcome by means of the polyfold theory due to the present authors The current paper addresses a significant amount of the arising issues and the general theory will be completed in part II of this paper To illustrate the polyfold theory the authors use the results of the present paper to describe an alternative construction of the Gromov Witten invariants for general compact symplectic manifolds Thinking and Acting Systemically Alan Daly, Kara Finnigan, 2016-05-19 This volume argues that districts are important as a lever for change given the limited success of school by school efforts Policies that focus on skill development recognize and support performance create opportunities for collaboration build leader capacity and create networks of knowledge sharing hold great potential for improving districts but it will require a paradigm shift in the way we view our public school system and those who work within it away from blame and toward complex systems change *Advancing the Frontiers of Heterodox Economics* Tae-Hee Jo, Zdravka Todorova, 2015-07-30 This collection of essays honors the life and work of one of the most prominent and fervent heterodox economists Frederic S Lee who has been at the heart of the heterodox economics movements for the past three decades Authors in this book demonstrate that heterodox economic has transcended the criticism of mainstream economics and more importantly that constructive developments are in the making by way of cross communications among various heterodox economics traditions Frederic S Lee's contributions to heterodox economics are centered on three themes the making of a history and identity of heterodox economics heterodox microeconomics and the heterodox analysis of social provisioning Part I addresses the importance of history theory research methods and institutions in the making of the identity of heterodox economics as an alternative to mainstream economics Part II delves into heterodox microeconomic theories in particular investment pricing competition markets and market governance as foundations of heterodox macroeconomic analyses Part III expands the analysis of the capitalist social provisioning process with an emphasis on its subsystems and their relationships over historical time Part IV encapsulates the life and work of Frederic S Lee Throughout his intellectual life Frederic S Lee has shown to many that the development of heterodox economics is rendered possible by unselfish and ceaseless efforts to build both theory and institutions Essays in this book attest that establishing an alternative critical theory to the status quo is not only possible but also serviceable to the majority of the population *Social Robots in Education* Georgios Lampropoulos, Stamatios Papadakis, 2025-05-03 This book focuses on recent advances in the field of social robots and their integration in education It elaborates on the progressive evolution of human robot interaction and educational robotics the emergence of digital pedagogy and the implementation of personalized learning methodologies The book also examines the use of artificial intelligence AI in education through the lenses of social robots Hence the book offers an overview of recent research into the adoption integration advancements and impact of social robots and AI in education and presents guidelines and suggestions on how to integrate them in classrooms Specifically the book Provides an in depth

overview of social robots and their use in education Presents the advances of social robots and AI in education Showcases innovative solutions and outcomes of integrating social robots in classrooms Discusses the challenges benefits and future research directions of using social robots and AI in education

On the Differential Structure of Metric Measure Spaces and Applications Nicola Gigli,2015-06-26 The main goals of this paper are i To develop an abstract differential calculus on metric measure spaces by investigating the duality relations between differentials and gradients of Sobolev functions This will be achieved without calling into play any sort of analysis in charts our assumptions being the metric space is complete and separable and the measure is Radon and non negative ii To employ these notions of calculus to provide via integration by parts a general definition of distributional Laplacian thus giving a meaning to an expression like where is a function and is a measure iii To show that on spaces with Ricci curvature bounded from below and dimension bounded from above the Laplacian of the distance function is always a measure and that this measure has the standard sharp comparison properties This result requires an additional assumption on the space which reduces to strict convexity of the norm in the case of smooth Finsler structures and is always satisfied on spaces with linear Laplacian a situation which is analyzed in detail

Homological Mirror Symmetry for the Quartic Surface Paul Seidel,2015-06-26 The author proves Kontsevich's form of the mirror symmetry conjecture for on the symplectic geometry side a quartic surface in $\mathbb{C}P^3$

Democratizing Cryptography Rebecca Slayton,2022-08-25 In the mid 1970s Whitfield Diffie and Martin Hellman invented public key cryptography an innovation that ultimately changed the world Today public key cryptography provides the primary basis for secure communication over the internet enabling online work socializing shopping government services and much more While other books have documented the development of public key cryptography this is the first to provide a comprehensive insiders perspective on the full impacts of public key cryptography including six original chapters by nine distinguished scholars The book begins with an original joint biography of the lives and careers of Diffie and Hellman highlighting parallels and intersections and contextualizing their work Subsequent chapters show how public key cryptography helped establish an open cryptography community and made lasting impacts on computer and network security theoretical computer science mathematics public policy and society The volume includes particularly influential articles by Diffie and Hellman as well as newly transcribed interviews and Turing Award Lectures by both Diffie and Hellman The contributed chapters provide new insights that are accessible to a wide range of readers from computer science students and computer security professionals to historians of technology and members of the general public The chapters can be readily integrated into undergraduate and graduate courses on a range of topics including computer security theoretical computer science and mathematics the history of computing and science and technology policy
