G. Thomas, 2016-02-23 This fully revised comprehensive fourth edition covers the whole field of physical geography including climate and atmosphere geomorphology biogeography hydrology oceans Quaternary environmental change soils remote sensing and GIS This new edition reflects developments in the discipline during the last decade with the expert advisory group providing an international perspective on the discipline of physical geography Over 2000 entries that are self contained or cross referenced include 200 that are new to this edition over 400 that are rewritten and updated and new supporting references and additional recommended reading in many others Entries removed from the last edition are available in the online resource This volume is the essential reference point for students of physical geography and related environmental disciplines lecturers and interested individuals alike *Handbook of Erosion Modelling* R. P. C. Morgan, Mark Nearing, 2016-04-13 The movement of sediment and associated pollutants over the landscape and into water bodies is of increasing concern with respect to pollution control prevention of muddy floods and environmental protection In addition the loss of soil on site has implications for declining agricultural productivity loss of biodiversity and decreased amenity and landscape value The fate of sediment and the conservation of soil are important issues for land managers and decision makers In developing appropriate policies and solutions managers and researchers are making greater use of erosion models to characterise the processes of erosion and their interaction with the landscape A

study of erosion requires one to think in terms of microseconds to understand the mechanics of impact of a single raindrop on a soil surface while landscapes form over periods of thousands of years These processes operate on scales of millimetres for single raindrops to mega metres for continents Erosion modelling thus covers quite a lot of ground This book introduces the conceptual and mathematical frameworks used to formulate models of soil erosion and uses case studies to show how models are applied to a variety of purposes at a range of spatial and temporal scales The aim is to provide land managers and others with the tools required to select a model appropriate to the type and scale of erosion problem to show what users can expect in terms of accuracy of model predictions and to provide an appreciation of both the advantages and limitations of models Problems covered include those arising from agriculture the construction industry pollution and climatic change and range in scale from farms to small and large catchments The book will also be useful to students and research scientists as an up to date review of the state of art of erosion modelling and through a knowledge of how models are used in practice in highlighting the gaps in knowledge that need to be filled in order to develop even better models Interior, Environment,

and heed George Monbiot Urgent gripping and sobering Six Minutes to Winter is a hair raising wake up call David Wallace Wells Powerful and insightful Although many have forgotten about nuclear weapons we shouldn't Charles Oppenheimer The world is currently closer to superpower conflict than at any time since the 1962 Cuban Missile Crisis World War III is a real possibility and with 12 000 warheads in the arsenals of more than half a dozen countries we are standing on a nuclear knife edge Despite receiving very little attention nuclear war is a far greater threat to humanity's immediate survival than climate change While climate heating threatens humanity over many decades nuclear war could destroy civilisation in just a few hours A major missile exchange would mean months of near total darkness followed by a decade long global nuclear winter that would destroy most life on Earth Virtually everyone would starve in the resulting worldwide famine and there would be no reliable refuge We are sleepwalking to Armageddon There are no mass marches no COPs no nuclear Greta But the climate experience teaches us that ignoring a problem is no solution and that a worldwide mobilisation can work Six Minutes to Winter presents an unflinching view of the nuclear nightmare but also describes how weapons can be taken off hair trigger alert and ultimately abolished altogether If human civilisation is to survive long term we have no alternative **Seismic**

their Contributions to Geoheritage R. M. Clary, E.J. Pyle, W.M. Andrews, 2024-07-23 The contributions in this book explore several geologically significant sites and in doing so acknowledge and explore not just the geological exposures themselves but also the people and issues that are fundamentally intertwined with the history of our science and its impact on our society Through selective examples of outcrops and locales integral to the history of geology we explore the evolution of modern geology as well as the geodiversity and geoheritage of our planet While the volume is far from comprehensive the chapters contained herein detail a range for geoheritage value scale of geoheritage sites and potential for geoheritage

opportunities that will promote a broader richer understanding of the complexity of the geoheritage of Earth Importantly many chapters offer a cautionary tale of sites almost lost to posterity and submit their take away lessons for community mobilization towards geoheritage site protection
