Alphose Zingoni, 2016-11-25 Insights and Innovations in Structural Engineering Mechanics and Computation comprises 360 papers that were presented at the Sixth International Conference on Structural Engineering Mechanics and Computation SEMC 2016 Cape Town South Africa 5-7 September 2016. The papers reflect the broad scope of the SEMC conferences and cover a wide range of engineering structures: buildings, bridges, towers, roofs, foundations, offshore structures, tunnels, dams, vessels, vehicles, and machinery, and engineering materials: steel, aluminium, concrete, masonry, timber, glass, polymers, composites, laminates, smart materials. Integrating Human Factors Methods and Systems Thinking for Transport Analysis and Design Gemma J. M. Read, Vanessa Beanland, Michael G. Lenné, Neville A. Stanton, Paul M. Salmon, 2017-07-26

Governments and road safety agencies around the world have either introduced or are considering safe system strategies. A long overdue acknowledgement that different elements of the road system contribute to road safety outcomes. Human factors approaches have a leading role here in both conceptualising the road system as a complex sociotechnical system and in providing practical approaches to support true systems based countermeasures. This book illustrates the potential for integrating contemporary systems based human factors methods with modern day driving assessment methods such as vehicle instrumentation and driving simulation to understand and enhance performance in modern day road transport systems. The book outlines why a fundamental paradigm shift is needed in the way these systems are designed and operated and illustrates how a wide range of accepted human factors approaches can be applied successfully to road transport to revolutionise the countermeasure design process. The practical illustrations of these human factors methods are applied to a long standing road and rail safety issue: rail level crossings where the road and rail systems intersect. The final chapter of the book highlights the utility of the human factors approach to reducing road trauma and discusses future applications of the approach. Comprehensive School Physical Activity Programs Russell Carson, Collin A. Webster, 2019-03-12 Schools are the ideal place to promote and apply the recommended accumulation of 60 minutes of daily physical activity. But until now it has been difficult to bridge the gap between research in this area and day to day practice in order to establish solid programs. That's where Comprehensive School Physical Activity Programs: Putting Research Into Evidence Based Practice comes in. CSPAP Model Brought to Life. The comprehensive school physical activity program CSPAP model originally outlined as a 2008 position statement by the National Association for Sport and Physical Education to promote physical activity throughout K-12 is brought to life through this comprehensive all in one resource. In the decade since that position statement CSPAP has been spreading through numerous initiatives which have mobilized a CSPAP field of study and a national framework for physical activity and physical education. CSPAP acts as a hub supporting physical activity through multiple components that can include physical education, physical activity before, during and after school, staff involvement and family and community engagement. Moreover, each CSPAP component can serve to strengthen and reinforce the academic goals of physical
