Kiernan examines the fraught career of New York Times science journalist William L. Laurence and shows his professional and personal lives to be a cautionary tale of dangerous proximity to power. Laurence was fascinated with atomic science and its militarization. When the Manhattan Project drew near to perfecting the atomic bomb, he was recruited to write much of the government's press materials that were distributed on the day that Hiroshima was obliterated. That instantly crowned Laurence as one of the leading journalistic experts on the atomic bomb. As the Cold War dawned, some assessed Laurence as a propagandist defending the militarization of atomic energy. For others, he was a skilled science communicator who provided the public with a deep understanding of the atomic bomb. Laurence leveraged his perch at the Times to engage in paid speechmaking, book writing, filmmaking, and radio broadcasting. His work for the Times declined in quality even as his relationships with people in power grew closer and more lucrative. Atomic Bill reveals extraordinary ethical lapses by Laurence, such as a cheating scandal at Harvard University and plagiarizing from press releases about atomic bomb tests in the Pacific. In 1963, a conflict of interest related to the 1964 World's Fair in New York City led to his forced retirement from the Times. Kiernan shows Laurence to have set the trend common among today's journalists of science and technology to prioritize gee-whiz coverage of discoveries. That approach, in which Laurence served the interests of governmental officials and scientists, recommends a full revision of our understanding of the dawn of the atomic era.

Government Reports Announcements & Index, 1989-05 **Bulk Collection of Signals Intelligence** National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Responding to Section 5(d) of Presidential Policy Directive 28: The Feasibility of Software to Provide Alternatives to Bulk Signals Intelligence Collection, 2015-03-24. The Bulk Collection of Signals Intelligence Technical Options study is a result of an activity called for in Presidential Policy Directive 28, PPD 28, issued by President Obama in January 2014 to evaluate U.S. signals intelligence practices. The directive instructed the Office of the Director of National Intelligence (ODNI) to produce a report within one year assessing the feasibility of creating software that would allow the intelligence community more easily to conduct targeted information acquisition rather than bulk collection. ODNI asked the National Research Council (NRC), the operating arm of the National Academy of Sciences and National Academy of Engineering, to conduct a study which began in June 2014 to assist in preparing a response to the President. Over the ensuing months, a committee of experts appointed by the Research Council produced the report.

Greedy Science Michael D. Gordin, W. Patrick McCray, 2025-02-18. The authors in this edited collection of essays explore this particular attribute, greed, by looking how it intersected and interlaced with science and technology and scientists and technologists during the 1980s. During this decade, greed, although undeniably present in earlier eras, became an extensive, expansive, and at times explicit characteristic of science both in the United States and around the world. 3. The global scientific community was reshaped in a multitude of ways, large and small, by money, fame, and the pursuit of celebrity.
