

PRESSURE TESTING THE GAS SUPPLY SYSTEM — The water heater and its manual gas shut-off valve **MUST** be disconnected from the gas supply piping system during any high pressure testing of that system at pressures in excess of 1/2 psi (14" w.c. / 3.5 kPa).

The water heater **MUST** be isolated from the gas piping system by closing the manual gas shut-off valve during any pressure testing of the gas supply piping at pressures equal to or less than 1/2 psi (14" w.c. / 3.5 kPa).

5. CONDENSATE

Filling The Condensate Trap:

THE CONDENSATE TRAP MUST BE FILLED WITH WATER, BEFORE OPERATING WATER HEATER.

To fill the trap (Refer to Figure 1), remove the plastic cap on the trap. Pour about one (1) cup of water into the trap and then re-install the plastic cap.

This is a condensing high efficiency appliance, therefore this unit has a condensate removal system. Condensate is water vapor, derived from the combus-

tion products. This condensate does have a low pH and condensate removal must comply with all local codes. See information below for optional Condensate Neutralizer, if required. It is very important that the condensate line is sloped away from and down to a suitable inside drain. If the condensate outlet on this unit is lower than the drain, you must use a condensate removal pump. It is also very important that the condensate line is not exposed to freezing temperatures, or any other type of blockage. Plastic tubing should be the only material used for the condensate line. Steel, brass, copper, or other metals will be subject to corrosion and deterioration, so they are not recommended to be used for the condensate drain line. A second vent may be necessary to prevent condensate line vacuum lock if a long horizontal run is used. Also an increase to 1" tubing may be necessary.

6. **WIRING —** A correct polarity 120V 60 Hz power supply, with suitable disconnect means, must be connected to the black and white leads provided. The maximum current draw by these models is 6 Amps. The water heater, when installed, must be electri-

Figure 1 - Condensate Trap

INSTALLATION OF A CONDENSATE NEUTRALIZER AND PUMP (Not Supplied)

Condensate line must be sloped down at least 1/8" per foot to properly drain. If this cannot be done or a very long length of condensate piping is used, you

must increase the condensate piping to a minimum of 1" ID or use a condensate pump.

Rheem Spiderfire Installation Manual
