McDaniel, 2014-06-28 A concise guide to the theory and application of numerical methods for predicting ocean acoustic propagation also providing an introduction to numerical methods with an overview of those methods presently in use An in depth development of the implicit finite difference technique is presented together with bench mark test examples included to demonstrate its application to realistic ocean environments Other applications include atmospheric acoustics plasma physics quantum mechanics optics and seismology

Numerical Ocean Acoustic Propagation in Three Dimensions Ding Lee, Martin H. Schultz, 1995 This book introduces a comprehensive mathematical formulation of the three dimensional ocean acoustic propagation problem by means of functional and operator splitting techniques in conjunction with rational function approximations It presents various numerical solutions of the model equation such as finite difference alternating direction and preconditioning The detailed analysis of the concept of 3D $N \times 2D$ and 2D problems is very useful not only mathematically and physically but also computationally The inclusion of a complete detailed listing of proven computer codes which have been in use by a number of universities and research organizations worldwide makes this book a valuable reference source Advanced knowledge of numerical methods applied mathematics and ocean acoustics is not required to understand this book It is oriented toward graduate students and research scientists to use for research and application purposes

Trends in Industrial and Applied Mathematics Abul Hasan Siddiqi,M. Kocvara,2013-12-01 An important objective of the study of mathematics is to analyze and visualize phenomena of nature and real world problems for its proper understanding Gradually it is also

becoming the language of modern financial instruments To project some of these developments the conference was planned under the joint auspices of the Indian Society of Industrial and Applied mathematics ISIAM and Guru Nanak Dev University G N D U Amritsar India Dr Pammy Manchanda chairperson of Mathematics Department G N D U was appointed the organizing secretary and an organizing committee was constituted The Conference was scheduled in World Mathematics Year 2000 but due one reason or the other it could be held during 22-25 January 2001 However keeping in view the suggestion of the International Mathematics union we organized two symposia Role of Mathematics in industrial development and vice versa and How image of Mathematics can be improved in public These two symposia aroused great interest among the participants and almost everyone participated in the deliberations The discussion in these two themes could be summarized in the lengthy following lines Tradition of working in isolation is a barrier for interaction with the workers in the other fields of science and engineering what to talk of non academic areas specially the private sector of finance and industry Therefore it is essential to build bridges within institutions and between institutions

Nonstandard Finite Difference Models of Differential Equations Ronald E. Mickens, 1994 This book provides a clear summary of the work of the author on the construction of nonstandard finite difference schemes for the numerical integration of differential equations The major thrust of the book is to show that discrete models of differential equations exist such that the elementary types of numerical instabilities do not occur A consequence of this result is that in general bigger step sizes can often be used in actual calculations and or finite difference schemes can be constructed that are conditionally stable in many instances whereas in using standard techniques no such schemes exist The theoretical basis of this work is centered on the concepts of exact and best finite difference schemes In addition a set of rules is given for the discrete modeling of derivatives and nonlinear expressions that occur in differential equations These rules often lead to a unique nonstandard finite difference model for a given differential equation
