Bones Elaine Dewar,2011-03-04 Scientists not so long ago unanimously believed that people first walked to the New World from northeast Asia across the Bering land bridge at the end of the Ice Age 11 000 years ago But in the last ten years new tools applied to old bones have yielded evidence that tells an entirely different story In Bones Elaine Dewar records the ferocious struggle in the scientific world to reshape our views of prehistory She traveled from the Mackenzie River valley in northern Canada to the arid plains of the Brazilian state of Piaui from the skull and bones lines offices of the Smithsonian Institution to the basement lab of an archaeologist in Washington State who wondered if the FBI was going to come for him She met scientists at war with each other and sought to see for herself the oldest human remains on these continents Along the way she found that the old answer to the question of who were the First Americans was steeped in the bitter tea of

Johnson, 2012-08-01 In the 1880s science witnessed a major shift Charles Darwin proposed his theory of evolution People dug up the first dinosaur fossils And the field of paleontology the study of ancient plants and animals emerged Othniel Charles Marsh and Edward Drinker Cope became enthralled with these new ideas discoveries and developments Both were determined to become world famous paleontologists When they met in 1863 they started off as friends But within a few years competition drove the men apart Each fought bitterly to discover more fossils name more species and publish more papers than the other In their haste to outdo each other they both produced some shoddy work The resulting confusion took many years to discover and correct and their toxic relationship crippled the field of paleontology for decades afterward However the competition also produced a wealth of fossils These laid a firm foundation for the field of paleontology and supported Darwin's theory of evolution Marsh's and Cope's discoveries generated keen public interest in prehistoric life and rich data for future generations of paleontologists This book explores the great rivalry between Marsh and Cope showing how it brought out the best and the
