**The Global Politics of Science and Technology - Vol. 2** Maximilian Mayer, Mariana Carpes, Ruth Knoblich, 2014-08-20 An increasing number of scholars have begun to see science and technology as relevant issues in International Relations IR acknowledging the impact of material elements technical instruments and scientific practices on international security statehood and global governance This two volume collection brings the debate about science and technology to the center of International Relations It shows how integrating science and technology translates into novel analytical frameworks conceptual approaches and empirical puzzles and thereby offers a state of the art review of various methodological and theoretical ways in which sciences and technologies matter for the study of international affairs and world politics The authors not only offer a set of practical examples of research frameworks for experts and students alike but also propose a conceptual space for interdisciplinary learning in order to improve our understanding of the global politics of science and technology The second volume raises a plethora of issue areas actors and cases under the umbrella notion techno politics Distinguishing between interactional and co productive perspectives it outlines a toolbox of analytical frameworks that transcend technological determinism and social constructivism

The Physics of Ettore Majorana Salvatore Esposito, 2014-12-11 Through just a handful of papers Ettore Majorana left an indelible mark in the fields of physics mathematics computer science and even economics before his mysterious disappearance in 1938 It is only now that the importance of Majorana s work is being realised Majorana fermions

are intensely studied today and his work on neutrino physics has provided possible explanations for the existence of dark matter In this unique volume Salvatore Esposito explores not only Majorana's known papers but even more interestingly unveils his unpublished works as well These include powerful methods and results ranging from the atomic two centre problem the Thomas Fermi model and ferromagnetism to quasi stationary states n component relativistic wave equations and quantum scalar electrodynamics Featuring biographical notes and contributions from leading experts Evgeny Akhmedov and Nobel Laureate Frank Wilczek this fascinating book will captivate graduate students and researchers interested in frontier science as well as in the history of science

Orzel,2014-12-09 When it comes to science too often people say I just don t have the brains for it and leave it at that Why is science so intimidating and why do people let themselves feel this way What makes one person a scientist and another disinclined even to learn how to read graphs The idea that scientists are people who wear lab coats and are somehow smarter than the rest of us is a common yet dangerous misconception that puts science on an intimidating pedestal How did science become so divorced from everyday experience In Eureka science popularizer Chad Orzel argues that even the people who are most forthright about hating science are doing science often without even knowing it Orzel shows that science is central to the human experience every human can think like a scientist and regularly does so in the course of everyday activities The common misconception is that science is a body of boring abstract often mathematical facts In truth science is a process Looking at the world Thinking about what makes it work Testing your mental model by comparing it to reality and Telling others about your results all things that people do daily By revealing the connection between the everyday activities that people do solving crossword puzzles playing sports or even watching mystery shows on television and the processes used to make great scientific discoveries Eureka shows that this process is one everybody uses regularly and something that anyone can do Rethinking Communication Geographies Jansson, André,2022-05-17 This timely research handbook offers
