Cost-Benefit Analysis of the African Risk Capacity Facility Daniel J. Clarke, Ruth Vargas Hill, 2013-11-01 Governments play a key role in supporting populations affected by natural disasters including rebuilding infrastructure to ensure continued services and scaling up public safety nets to prevent widespread hunger and poverty However the traditional approach of limiting greater spending to the aftermath of a disaster has many drawbacks External support from bilateral or multilateral donors can be slow and unreliable Private sector reinsurance can be prohibitively expensive And reallocating budgets toward recovery and reconstruction is typically a slow process that can even hurt long term development by drawing resources away from effective programs Some countries are trying to mitigate this liability by banding together and creating sovereign catastrophe risk pools that allow governments to coordinate with one another to insure their uncertain fiscal liabilities at lower cost Countries contribute to the pool which then provides payments if an insured natural disaster strikes The African Risk Capacity ARC has been proposed as a pan Africa drought risk pool to insure against drought risk in Africa south of the Sahara If fully operationalized the ARC will mark a major change in how donors fund emergency support to countries in Africa during times of need In this

paper we undertake a cost benefit analysis of the ARC pool and discuss how lessons can inform the design of the ARC
