World of Youth and Education explores how increasing migration and population changes are having an unprecedented impact on global education. Given that the number of children of migrant background is growing internationally, there is a need for increasing awareness of the educational attainment and cultural integration of this population group. This book presents international perspectives on migration and youth and analyses what kinds of effects such demographic changes are having on educational systems around the world. The chapters in this volume provide a fascinating insight into how countries around the world are dealing with loss or growth in their young population as well as changes to their education systems. Written by specialist academics from the relevant country, the book covers Cuba, Lithuania, the United Kingdom, the United States, Finland, Greece, Germany, Austria, Hungary, Latvia, China, Australia, India, Italy, and Poland. Taking into consideration the countries' social and political context, the chapters discuss educational issues surrounding curriculum assessment and the opportunities available for the support of young people. Conclusions are drawn about what could be done in the future for the benefit of both the migrant and the existing populations. The *Shifting Global World of Youth and Education* will be of great interest to academics, researchers, and postgraduate students in the disciplines of education, sociology, political sciences, and social work. The book will also give secondary teachers, teaching assistants, social workers, and youth workers the opportunity to reflect on their role within a national and international context. **McGraw-Hill's ASVAB, 3rd Edition** Janet E.

Aneshensel, 2012-12-11 This book presents the elaboration model for the multivariate analysis of observational quantitative data This model entails the systematic introduction of third variables to the analysis of a focal relationship between one independent and one dependent variable to ascertain whether an inference of causality is justified Two complementary strategies are used an exclusionary strategy that rules out alternative explanations such as spuriousness

and redundancy with competing theories and an inclusive strategy that connects the focal relationship to a network of other relationships including the hypothesized causal mechanisms linking the focal independent variable to the focal dependent variable. The primary emphasis is on the translation of theory into a logical analytic strategy and the interpretation of results. The elaboration model is applied with case studies drawn from newly published research that serve as prototypes for aligning theory and the data analytic plan used to test it. These studies are drawn from a wide range of substantive topics in the social sciences such as emotion management in the workplace, subjective age identification during the transition to adulthood, and the relationship between religious and paranormal beliefs. The second application of the elaboration model is in the form of original data analysis presented in two Analysis Journals that are integrated throughout the text and implement the full elaboration model. Using real data, not contrived examples, the text provides a step-by-step guide through the process of integrating theory with data analysis in order to arrive at meaningful answers to research questions.

Excellence Gaps in Education Jonathan A. Plucker, Scott J. Peters, 2020-01-15. 2017 Texas Association for Gifted and Talented Legacy Scholar Book Award. 2017 National Association of Gifted Children Scholar Book of the Year Award. In *Excellence Gaps in Education*, Jonathan A. Plucker and Scott J. Peters shine a spotlight on excellence gaps, the achievement gaps among subgroups of students performing at the highest levels of achievement. Much of the focus of recent education reform has been on closing gaps in achievement between students from different racial, ethnic, or socioeconomic backgrounds by bringing all students up to minimum levels of proficiency. Yet issues related to excellence gaps have been largely absent from discussions about how to improve our schools and communities. Plucker and Peters argue that these significant gaps reflect the existence of a persistent talent underclass in the United States among African American, Hispanic, Native American, and poor students, resulting in an incalculable loss of potential among our fastest-growing populations. Drawing on the latest research and a wide range of national and international data, the authors outline the scope of the problem and make the case that excellence gaps should be targeted for elimination. They identify promising interventions for talent development already underway in schools and provide a detailed review of potential strategies, including universal screening, flexible grouping, targeted programs, and psychosocial interventions. *Excellence Gaps in Education* has the potential for changing our national conversation about equity and excellence and bringing fresh attention to the needs of high-potential students from underrepresented backgrounds.
