Royal Free and University College Medical School London Assessment is a key method of improving standards as well as

establishing competency However despite major developments in the assessment of clinical competence in the last two

higher education This book comprehensively covers all aspects of assessment It considers current and future policy and

practice including the Modernising Medical Careers training programme it promotes a system incorporating more

meaningful assessments rather than just tests of knowledge and skill Assessment in Medical Education and Training will be

useful to everyone involved in healthcare education including tutors trainers clinical supervisors and assessors in both

primary and secondary care It will also be important reading for consultants and general practitioners with responsibility for

registrars and healthcare education policy makers and shapers Acquisition of knowledge and skills is not sufficient alone we

need to be able to apply the knowledge skills and strategies learnt and in turn these can be the appropriate targets of

assessment There is a movement away from traditional multiple choice tests to assessments that include a wide variety of

methods and so provide for more meaningful assessments which can better capture significant outcomes in order to assure

their future success Neil Jackson Alex Jamieson and Anwar Khan in the Introduction This thoughtful provocative and eclectic
