What is e-book? Nicolae Sfetcu, 2014-05-10 The e-book guide for publishers: how to publish EPUB format ebook readers and suppliers. An electronic book, also e-book, ebook, electronic book, digital book, is a book-length publication in digital form consisting of text, images, or both, and produced on, published through, and readable on computers or other electronic devices. An e-book can be purchased, borrowed, downloaded, and used immediately, whereas when one buys or borrows a book, one must go to a bookshop, a home library, or public library during limited hours or wait for a delivery. Electronic publishing or ePublishing includes the digital publication of e-books and electronic articles and the development of digital libraries and catalogues. EPUB, short for electronic publication, alternatively capitalized as ePub, ePUB, EPub, or epub, with EPUB preferred by the vendor, is a free and open e-book standard by the International Digital Publishing Forum (IDPF). Self-publishing is the publication of any book or other media by the author of the work without the involvement of an established third party publisher. One of the greatest benefits brought about by ebooks software is the ability for anyone to create professional ebooks without having to fork out thousands of dollars to design and publish a book. People can easily become authors overnight and earn income from selling online ebooks. *HWM*, 2008-08 Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in depth reviews. **Chips 2020** Bernd Hoefflinger, 2011-12-15

The chips in present day cell phones already contain billions of sub 100 nanometer transistors By 2020 however we will see systems on chips with trillions of 10 nanometer transistors But this will be the end of the miniaturization because yet smaller transistors containing just a few control atoms are subject to statistical fluctuations and thus no longer useful We also need to worry about a potential energy crisis because in less than five years from now with current chip technology the internet alone would consume the total global electrical power This book presents a new sustainable roadmap towards ultra low energy femto Joule high performance electronics The focus is on the energy efficiency of the various chip functions sensing processing and communication in a top down spirit involving new architectures such as silicon brains ultra low voltage circuits energy harvesting and 3D silicon technologies Recognized world leaders from industry and from the research community share their views of this nanoelectronics future They discuss among other things ubiquitous communication based on mobile companions health and care supported by autonomous implants and by personal carebots safe and efficient mobility assisted by co pilots equipped with intelligent micro electromechanical systems and internet based education for a billion people from kindergarden to retirement This book should help and interest all those who will have to make decisions associated with future electronics students graduates educators and researchers as well as managers investors and policy makers
