Virtual Reality in Manual Order Picking Jan-Karl Knigge, 2021-08-30 The introduction of consumer level head mounted devices HMDs has led to a major drop in the application costs of virtual reality VR making the technology available for a wide range of users To understand if VR HMDs can be used for planning and training in the context of manual order picking this thesis provides the results of a large scale randomized controlled study in which order picking has been compared between a virtual and a real environment The results imply that VR HMDs can indeed be used by manufacturers and warehouse operators in a rack planning process if the reduction of searching times or the perceived workload is in focus Additionally the findings enable the use of VR HMDs for

scientific research on human centred rack design Finally the thesis highlights the usability of VR HMDs for training manual order picking activities
