**School Leader's Guide to Root Cause Analysis** Paul Preuss, 2013-09-27 Don't jump from problem to solution without first investigating root causes. This book helps you more accurately focus on school improvement issues so you can avoid wasting precious time and resources. It is clearly written, contains lots of real examples, and is presented in a style and format designed for the non-expert. It will help you make decisions which will improve learning for all students. The Wiley Handbook of Cognition and Assessment Andre A. Rupp, Jacqueline P. Leighton, 2016-11-14 This state-of-the-art resource brings together the most innovative scholars and thinkers in the field of testing to capture the changing conceptual, methodological, and applied landscape of cognitively grounded educational assessments. Offers a methodologically rigorous review of cognitive and learning sciences models for testing purposes as well as the latest statistical and technological know-how for designing scoring and interpreting results. Written by an international team of contributors at the cutting edge of cognitive psychology and educational measurement under the editorship of a research director at the Educational Testing Service and an esteemed professor of educational psychology at the University of Alberta as well as supported by an expert advisory board. Covers conceptual frameworks, modern methodologies, and applied topics in a style and at a level of technical detail that will appeal to a wide range of readers from both applied and scientific backgrounds. Considers emerging topics in cognitively grounded assessment including applications of emerging socio-cognitive models, cognitive models for human and automated scoring, and various innovative virtual performance assessments. **Kaplan No-Stress Guide to the New York State 8th Grade Tests** Cynthia Johnson, Drew Johnson, 2001 Vincent Descombes brings together an astonishingly large body of philosophical and anthropological thought to present a thoroughgoing critique of contemporary cognitivism and to develop a powerful new philosophy of the mind. Beginning with a critical examination of American cognitivism and French structuralism, Descombes launches a more general critique of all philosophies that view the mind in strictly causal terms and suppose that the brain and not the person thinks. Providing a broad historical perspective, Descombes draws surprising links between cognitivism and earlier anthropological projects such as Levi Strauss's work on the symbolic status of myths. He identifies as incoherent both the belief that mental states are detached from the world and the idea that states of mind are brain states. These assumptions beg the question of the relation between mind and brain. In place of cognitivism, Descombes offers an anthropologically based theory of mind that emphasizes the mind's collective nature. Drawing on Wittgenstein, he maintains that mental acts are properly attributed to the person, not the brain, and that states of mind far from being detached from the world, require a historical and cultural context for their very intelligibility. Available in English for the first time, this is the most outstanding work of one of France's finest contemporary philosophers. It provides a much-needed link between the continental and Anglo-American traditions, and its impact will extend beyond philosophy to anthropology, psychology, critical theory, and French studies. **The Teach Like a Champion Guide to the Science of Reading** Doug
