Today universities around the world find themselves going beyond the traditional roles of research and teaching to drive the development of local economies through collaborations with industry At a time when regions with universities are seeking best practices among their peers Shiri M Breznitz argues against the notion that one university s successful technology transfer model can be easily transported to another Rather the impact that a university can have on its local economy must be understood in terms of its idiosyncratic internal mechanisms as well as the state and regional markets within which it operates To illustrate her argument Breznitz undertakes a comparative analysis of two universities Yale and Cambridge and the different outcomes of their attempts at technology commercialization in biotech By contrasting these two universities their unique policies organizational structure institutional culture and location within distinct national polities she makes a powerful case for the idea that technology transfer is dependent on highly variable historical and environmental factors Breznitz highlights key features to weigh and engage in developing future university and economic development policies that are tailor made for their contexts

Diverse Leadership Perspectives in Education: From K-12 to Higher Education Soles, Brooke,Meyerott, Theresa,2025-05-22 Diverse

leadership in education is crucial for fostering inclusive and equitable learning environments across all levels of the education system. From K-12 schools to higher education institutions, leadership plays a pivotal role in shaping policies, curriculum, and school culture. Embracing diversity in leadership enhances the overall educational experience by ensuring that all voices are heard and valued, and it allows underdeveloped voices to be heard. Allowing diverse voices in leadership is essential for addressing systemic inequalities while also promoting innovation and preparing students for a globalized world where diverse perspectives are key to success. Exploring diverse leadership across educational levels provides insight into how these varied perspectives can positively impact both institutional practices and student outcomes.

Diverse Leadership Perspectives in Education: From K-12 to Higher Education provides an overview of leadership's evolving purpose and scope, containing research, practical strategies, and examples of complex problems in the educational system and how having a diverse voice in leadership can help solve these problems. It explores the assets of diversity, multiple perspectives, and the role of students in the educational landscape. This book covers topics such as educational technology, gender, and diversity, and information science, and is a useful resource for educators, sociologists, academicians, and researchers.

Statistical Mechanics for Athermal Fluctuation Kiyoshi Kanazawa, 2017-11-20. The author investigates athermal fluctuation from the viewpoints of statistical mechanics in this thesis. Stochastic methods are theoretically very powerful in describing fluctuation of thermodynamic quantities in small systems on the level of a single trajectory and have been recently developed on the basis of stochastic thermodynamics. This thesis proposes for the first time a systematic framework to describe athermal fluctuation, developing stochastic thermodynamics for non-Gaussian processes, while thermal fluctuations are mainly addressed from the viewpoint of Gaussian stochastic processes in most of the conventional studies. First, the book provides an elementary introduction to the stochastic processes and stochastic thermodynamics. The author derives a Langevin-like equation with non-Gaussian noise as a minimal stochastic model for athermal systems, and its analytical solution by developing systematic expansions is shown as the main result. Furthermore, the author shows a thermodynamic framework for such non-Gaussian fluctuations and studies some thermodynamics phenomena, i.e., heat conduction and energy pumping, which shows distinct characteristics from conventional thermodynamics. The theory introduced in the book would be a systematic foundation to describe dynamics of athermal fluctuation quantitatively and to analyze their thermodynamic properties on the basis of stochastic methods.
