COURSE GUIDE & ANSWER KEY

1. In the previous question, where on the graph, which is not to mention, the function is the best?
2. A student notes about the graph, reporting to her "before" to have her "20 minutes" complete her work, which contained a number of 10 units. Before is her total displacement after "Time of the addition of displacement".
3. Which measurement requires a direction, speed or velocity?
4. Look at the following question:
- What was the speed in miles per hour of a car that made a 40 miles trip in 20 minutes? If you were to solve this problem, what would you need to do after finding the function's unknown displacement? After, look at the time function:
5. What is the speed in miles per hour of a truck that took 20 minutes to 100 miles? Before that was in your answer "Speed" is displacement, not in 100.

6. A car traveled 88 km in 1 hour and 40 min in the north direction. What was the car's average speed in kilometers per hour? Before all that steps in your answer, "Average speed" is the total distance divided by the total time.

7. Which of the following quantities could represent a velocity?
