[The Limits of Economic Science](#) R.B. McKenzie, 2012-12-06 The essays in this volume were a challenge to me to write I am an economist to the core inclined to evaluate most observed behavior and public policies with conventional neoclassical

theory The essays represent my attempt to come to grips with the meaning and importance of what I try to do as a professional economist They reflect my attempt to acquire a new and improved understanding of the usefulness and limitations of the writings of professional economists especially my own In this regard although I hope others will find the thoughts useful the volume represents a personal statement of how one economist views his and others work For that reason the discussion is often openly normative tinged with the conviction that social discourse is more than costs and benefits and that economics cannot be fully evaluated by the methods economic methods that are the subject of the evaluation These essays could not have been written without considerable encouragement and help from colleagues and friends The following people are recognized for having read one or more chapters and for having contributed critical substantive comments Diana Bailey Wilfred Beckerman Geoffrey Brennan William Briet James Buchanan Delores Martin David Maxwell Mary Ann McKenzie Warren Samuels Robert Staaf Richard Wagner Karen Vaughn and Bruce Yandle I am very much in their debt However they should not be held accountable for any of the positions taken and any errors that may remain

Critical Appraisal of Physical Science as a Human Enterprise Mansoor Niaz, 2009-02-07 It is generally believed that doing science means accumulating empirical data with no or little reference to the interpretation of the data based on the scientist's theoretical framework or presuppositions Holton 1969a has deplored the widely accepted myth experimenticism according to which progress in science is presented as the inexorable result of the pursuit of logically sound conclusions from unambiguous experimental data Surprisingly some of the leading scientists themselves Millikan is a good example have contributed to perpetuate the myth with respect to modern science being essentially empirical that is carefully tested experimental facts free of a priori conceptions leading to inductive generalizations Based on the existing knowledge in a field of research a scientist formulates the guiding assumptions Laudan et al 1988 presuppositions Holton 1978 1998 and hard core Lakatos 1970 of the research program that constitutes the imperative of presuppositions which is not abandoned in the face of anomalous data Laudan and his group consider the following paraphrase of Kant by Lakatos as an important guideline philosophy of science without history of science is empty Starting in the 1960s this historical school has attempted to redraw and replace the positivist or logical empiricist image of science that dominated for the first half of the twentieth century Among other aspects one that looms large in these studies is that of guiding assumptions and has considerable implications for the main thesis of this monograph Chapter 2

The Role and Risks of Assumptions in Physical Science Modelling Allan Anforth, 2024-10-11 This book questions the extent to which some physical scientists may have unintentionally misused the English language to varying degrees in arriving at theories that are presented to the world as being statements of fact about the universe The book focuses primarily on large and small scale extremes i.e. cosmological theories and quantum theories It deals with the core concepts of time and space as they are presented in the theories under consideration As a demonstration of the sensitivity of the outcome of physical

modelling to the assumptions made the book presents an alternative cosmological model based on some altered physical assumptions that see the much vaunted inconsistency between General Relativity and Quantum Field Theory disappear
