Education means considerably more than **just teaching** a student to read, write, and manipulate numbers. Computers, the Internet, and advanced electronic devices are becoming essential in everyday life and have changed the way information is gathered. How this new technology is utilized in the curriculum and managed by teachers will have an important role to play in widening the resource and knowledge base for all students.

Technology affects the way teachers teach and students learn. **To make** the best use of information technology **IT**, schools need a workable plan to fully integrate it into all aspects of the curriculum so students are taught how, why, and when to use technology to further enhance their learning.

It is the principal's responsibility, and should be part of the school's plan, to ensure that all staff are consulted about the changes, and that the change is carefully organised. Some teachers may be resistant, especially if they have not had much experience with computers, so training teachers is essential in implementing IT into the school curriculum. Staff members must feel involved in the process of acquiring technology, and in learning how to operate it, in order for them to increase their confidence in using IT as a curriculum tool. Teachers are only going to be able to incorporate IT into their lessons **if they are competent users themselves** **(Reksten, 2000)**.

In addition, teachers need to be aware that IT within the classroom is extremely flexible, but that they need to plan what purpose IT serves in each lesson. The skills a child learns are the
