What is a sloth?

A sloth is a mammal found in the northwestern of Central and South America. There are two types of sloth – two-toed sloths and three-toed sloths.

Appearance

Sloths have long hairy, round heads and thick skin. They have long sharp claws for climbing trees and hanging from branches. Their fur often has a green tinge caused by the algae that grows on it. The algae can help camouflage the sloth, and help to keep predators such as eagles, snakes and jaguars.

A three-toed sloth.

A two-toed sloth.

Habitat

Sloths are arboreal animals – this means that they spend most of their time in trees. They eat, sleep and even give birth hanging upside down from branches. Sloths only come down from the trees to go to the toilet.

Diet

Sloths mostly eat leaves, fungi, fruits and shoots, but they have been known to occasionally eat insects and birds. They have an extremely slow digestion process which takes up most of their body's energy – one sloth can take a month of food to fully digest!

Movement

Sloths move extremely slowly. They crawl through the trees at an average speed of just a centimetre per minute, and can move closer to the ground. They are fearless, and occasionally will even climb up to drink water from the canopy.

Did you know...?

- Some two-toed sloths can move backwards!
- Sloths can survive up to 3 months in the water.
- Sloths can be found in both Central and South America.
- They also go to the toilet once a week.
