

ACTION RESEARCH: A TOOL FOR IMPROVING TEACHER QUALITY AND CLASSROOM PRACTICE

Katherine A. O'Connor, H. Carol Greene, Patricia J. Anderson
Department of Curriculum and Instruction, East Carolina University

Abstract

This paper examines the experiences and insights of 34 graduate students in an elementary education master's degree program as they engaged in an action research project during two required action research courses over a year's span. Data were analyzed according to the following two research questions: 1) What do teachers report as the most difficult parts of the action research process? and 2) How does participation in action research impact teachers' current and future instructional practices? Data were collected using a survey instrument. Implications and recommendations for future research are presented.

Introduction

Action research is a tool that is used to help teachers and other educators uncover strategies to improve teaching practices (Sagor, 2004); it is a viable and realistic endeavor for all educators. Action research requires teachers to design a study in an area of interest that they would like to carry out in their classrooms or schools. Many times, action research is considered a professional development opportunity because, frequently, teachers test a new instructional strategy, assess a new curriculum program, or evaluate an existing pedagogical method. In many research studies, participating in action research has been found to be the impetus for positive change exemplified by teacher improvement, self-reflection, and overall learning that enhances classroom practices (Ferrance, 2000; Johnson & Button, 2000; Ross, Rolheiser, & Hogoboom-Gray, 1999; Sax & Fisher, 2001). These forms of change may impact teacher quality.

This study looks at the role action research may play in creating positive change in teachers' practices. It examines the experiences and insights of 34 graduate students in an elementary education master's degree program as they engaged in an action research project during two required action research courses over a year's span. The study follows students from the proposal stage through the final presentation stage. In phase one, data were collected after the introductory action research course where students prepare a proposal for their own research. Data were collected again at the end of the second course, after students had executed the research study, collected, analyzed, and reported their data; this paper focuses on the second phase of the project. The two guiding research questions were: 1) What do teachers report as the most difficult parts of the action research process? 2) How does participation in action research impact teachers' current and future instructional practices?

Literature Review

This review examines the role of research in teachers' classrooms. Specifically, action research is defined as one form of meaningful research that can be conducted by teachers with students, colleagues, parents, and/or families in a natural setting of the classroom or school. Action research allows teachers to become the "researcher" and provides opportunities for them to be learners by improving instructional practices and reflecting about pedagogical choices as well. Following is a review of the role of action research in teacher improvement.

Role of Action Research

What role does research play in a teacher's classroom? It is often heard that many practicing classroom teachers are too busy to read research studies, let alone conduct research. For many practitioners, research appears to be a complex set of steps too difficult and time-consuming for classroom teachers to participate in or lead. Teachers who are immersed in their own classrooms may
