**IBM and Cisco: Together for a World Class Data Center** Jon Tate,Pall Beck,Peter Clemens,Santiago Freitas,Jeff Gatz,Michele Girola,Jason Gmitter,Holger Mueller,Ray O'Hanlon,Veerendra Para,Joe Robinson,Andy Sholomon,Jason Walker,IBM Redbooks,2013-07-31 This IBM Redbooks publication is an IBM and Cisco collaboration that articulates how IBM and Cisco can bring the benefits of their respective companies to the modern data center It documents the architectures solutions and benefits that can be

achieved by implementing a data center based on IBM server storage and integrated systems with the broader Cisco network. We describe how to design a state of the art data center and networking infrastructure combining Cisco and IBM solutions. The objective is to provide a reference guide for customers looking to build an infrastructure that is optimized for virtualization, is highly available, is interoperable, and is efficient in terms of power and space consumption. It will explain the technologies used to build the infrastructure, provide use cases, and give guidance on deployments.

*Storage and Network Convergence Using FCoE and iSCSI* Sangam Racherla, Silvio Erdenberger, Harish Rajagopal, Kai Ruth, IBM Redbooks, 2014-07-18. Along with servers and networking infrastructure, networked storage is one of the fundamental components of a modern data center. Because storage networking has evolved over the past two decades, the industry has settled on the basic storage networking technologies. These technologies are Fibre Channel, FC storage area networks (SANs), Internet Small Computer System Interface (iSCSI) based Ethernet attachment, and Ethernet based network attached storage (NAS). Today, lossless, low latency, high speed FC SANs are viewed as the high performance option for networked storage. iSCSI and NAS are viewed as lower cost, lower performance technologies. The advent of the 100 Gbps Ethernet and Data Center Bridging (DCB) standards for lossless Ethernet give Ethernet technology many of the desirable characteristics that make FC the preferred storage networking technology. These characteristics include comparable speed, low latency, and lossless behavior. Coupled with an ongoing industry drive toward better asset utilization and lower total cost of ownership, these advances open the door for organizations to consider consolidating and converging their networked storage infrastructures with their Ethernet data networks. Fibre Channel over Ethernet (FCoE) is one approach to this convergence, but 10 Gbps enabled iSCSI also offers compelling options for many organizations with the hope that their performance can now rival that of FC. This IBM Redbooks publication is written for experienced systems storage and network administrators who want to integrate the IBM System Networking and Storage technology successfully into new and existing networks. This book provides an overview of today's options for storage networking convergence. It reviews the technology background for each of these options and then examines detailed scenarios for them by using IBM and IBM Business Partner convergence products.

*Data-Centric Business and Applications* Aneta Poniszewska-Marańda, Natalia Kryvinska, Stanisław Jarząbek, Lech Madeyski, 2019-12-14. This book explores various aspects of software creation and development as well as data and information processing. It covers relevant topics such as business analysis, business rules requirements, engineering, software development processes, software defect prediction, information management systems, and knowledge management solutions. Lastly, the book presents lessons learned in information and data management processes and procedures.
