Bruce & Borg's Psychosocial Frames of Reference Terry Krupa, Bonnie Kirsh, 2024-06-01 Psychosocial health is a fundamental element of all human health and well-being. Psychological, emotional, and social factors interact to influence people's occupational lives in turn influencing psychosocial health. Occupational therapists practicing in contemporary health and social sectors require the knowledge, attitudes, and skills to identify and address these psychosocial factors. The classic and renowned Bruce Borg's Psychosocial Frames of Reference: Theories, Models, and Approaches for Occupation-Based Practice, Fourth Edition, by Drs. Terry Krupa, Bonnie Kirsh, and their contributors examines psychosocial models of practice and their application across a wide range of practice areas in occupational therapy instead of being singularly focused on practice areas of the needs of people living with identified mental illnesses. Efforts have been made to highlight the relevance of specific models to practice for people with mental illnesses, particularly where the issues experienced by this group have historically been poorly addressed. The authors have also organized models and practice approaches according to the level at which they intervene to create change: occupation, person, environment, and transdisciplinary levels. As their central domain of concern, the first group of occupational models or approaches have a focus on what people do in their daily lives. A second group of models reflect those that intervene at the level of the person. This group understands strengths and problems in occupation as evolving largely from features or qualities of the individual, and the therapeutic processes suggested are directed to changing or building upon these features. A third group of models and approaches focus on the psychosocial context and environment to elicit and enable a positive change in occupation. In some cases, these environmental models expand commonly held narrow definitions of clinical practice to encourage occupational therapists to engage in population-level practices. Finally, a small group of models of practice are labeled as transdisciplinary. Transdisciplinary models provide ways to develop

Crisis Lee Ann Hoff,2014-08-29 Unlike books focusing on a single crisis topic Crisis helps recognize common signs of endangerment across a range of life challenges by showing the interconnections between various harmful events Through media coverage of school shootings suicides domestic abuse workplace violence and more we ve become accustomed to hearing about violence and trauma almost invariably followed by reports that show all of the warning signs that were missed While it is impossible to predict when where and with whom a crisis will occur we do have the means to be better equipped to intervene in stressful situations before they tip over into a crisis Important preventative information is readily available and this book better prepares us to take appropriate responsive action Often a crisis is the result of a critical life event whether or not a life changing event turns into a crisis depends on the type timing and interpretation of the event the person s life cycle development phase history of healthy coping and available timely support In sum Lee Ann Hoff illustrates how to recognize crisis as both danger and opportunity The more we know about how to spot a potential crisis and what to do the more likely distressed persons will get the help they need
