Overview of the evolution of agricultural mechanization in Nepal: A focus on tractors and combine harvesters

Takeshima, Hiroyuki,2017-07-21 This study was conducted to understand the evolution of agricultural mechanization in Nepal specifically its determinants on both the demand and supply sides as well as impacts on agricultural production and associations with broader economic transformation processes in order to draw lessons that can be conveyed to other less mechanized countries Mechanization levels in Nepal a largely agricultural country were relatively low until a few decades ago However significant mechanization growth including the adoption of tractors has occurred since the 1990s against a backdrop of rising rural wages particularly for plowing combined with growing emigration and growth in key staple crop

yields and overall broad agricultural production growth as well as improved market access and participation This growth in mechanization has taken place despite the general absence of direct government support or promotion The growth of tractor use in the plains of the Terai zone has transformed agricultural production rather than inducing labor movement out of agriculture raising overall returns to scale in intensification and enabling the cultivation of greater areas by medium smallholders than by resource poor smallholders Tractors have also facilitated the intensification of crop production per unit of land among very small farmers enabling mechanization growth despite the continued decline in farm size although these farmers may not have benefited as much as medium smallholders Potential future research areas with policy relevance include mitigating accessibility constraints to tractor custom hiring services identifying appropriate regulatory policies for mechanization and providing complementary support to some smallholders who may not fully benefit from tractor adoption alone

The Real Cost of Cheap Food Michael Carolan, 2018-02-06 This thought provoking but accessible book critically examines the dominant food regime on its own terms by seriously asking whether we can afford cheap food and by exploring what exactly cheap food affords us Detailing the numerous ways that our understanding of food has narrowed such as its price per ounce combination of nutrients yield per acre or calories the book argues for a more contextual view of food when debating its affordability The first edition published in 2011 was widely praised for its innovative approach and readability In this new edition the author brings all data and citations fully up to date Increased coverage is given to many topics including climate change aquaculture financialization BRICS countries food based social movements gender and ethnic issues critical public health and land succession There is also greater discussion about successful cases of social change throughout all chapters by including new text boxes that emphasize these more positive messages The author shows why today's global food system produces just the opposite of what it promises The food produced under this regime is in fact exceedingly expensive Many of these costs will be paid for in other ways or by future generations and cheap food today may mean expensive food tomorrow By systematically assessing these costs the book delves into issues related but not limited to international development national security healthcare industrial meat production organic farming corporate responsibility government subsidies food aid and global commodity markets It is shown that exploding the myth of cheap food requires we have at our disposal a host of practices and policies
