People have

been tinkering with chemistry for thousands of years Whether out of curiosity or by necessity Homo sapiens have long loved to play with fire mixing and boiling concoctions to see what interesting beautiful and useful amalgamations they could create Early humans ground pigments to create durable paint for cave walls and over the next 70 thousand years or so as civilizations took hold around the globe people learned to make better medicines and discovered how to extract mix and smelt metals for cooking vessels weapons and jewelry Early chemists distilled perfume made soap and perfected natural inks and dyes Modern chemistry was born around 250 years ago when measurement mathematics and the scientific method were officially applied to experimentation In 1896 after the first draft of the periodic table was published scientists rushed to fill in the blanks The elemental discoveries that followed gave scientists the tools to visualize the building blocks of matter for the first time in history and they proceeded to deconstruct the atom Since then discovery has accelerated at an unprecedented rate At times modern chemistry and its creations have caused heartbreaking unthinkable harm but more often than not it makes our lives better With this fascinating hands on exploration of the history of chemistry inspire the next generation of great scientists **Salters Higher Chemistry**,1999 This work provides coverage of the content statements in the arrangements for Higher Chemistry organized by the three units in the course Energy Matters the World of Carbon and Chemical Reactions At the start of each unit students are given guidance on what they need to know and understand
