Studying the Sciences, Physics - Grades 10-12 Donnette Davis, **Mathematics and Science Achievement of U. S. Fourth- and Eighth-Grade Students in an International Context** Patrick Gonzales, 2010-02 The 2007 Trends in International Math and Science Study TIMSS is the 4th administration since 1995 of this international comparison. It is used to measure over time the math and science knowledge and skills of 4th and 8th graders. TIMSS is designed to align broadly with math and science curricula in the participating countries. This report focuses on the performance of U.S. students relative to that of their peers in other countries in 2007 and on changes in math and science achievement since 1995. Thirty-six countries or educational jurisdictions participated at grade 4 in 2007 while 48 participated at grade 8. This report also describes additional details about the achievement of U.S. student sub populations. Extensive charts, tables, and graphs.

Meeting the Challenges to Measurement in an Era of Accountability Henry Braun, 2016-01-29 Under pressure and support from the federal government, states have increasingly turned to indicators based on student test scores to evaluate teachers and schools as well as students themselves. The focus thus far has been on test scores in those subject areas where there is a sequence of consecutive tests such as in mathematics or English language arts with a focus on grades 4-8. Teachers in these subject areas, however, constitute less than thirty percent of the teacher workforce in a district. Comparatively little has been written about the measurement of achievement in the other grades and subjects. This volume seeks to remedy this imbalance by focusing on the assessment of student achievement in a broad range of grade levels and subject areas with particular attention to their use in the evaluation of teachers and schools in all. It addresses traditional end-of-course tests as well as alternative measures such as portfolios, exhibitions, and student learning objectives. In each case, issues related to design and development, psychometric considerations, and validity challenges are covered from both a generic and a content-specific perspective. The NCME Applications of Educational Measurement and Assessment series includes edited volumes designed to inform research-based applications of educational measurement and assessment. Edited by leading experts, these books are comprehensive and practical resources on the latest developments in the field.
