Dynamic systems theory and embodiment in psychotherapy research. A new look at process and outcome Sergio Salvatore, Wolfgang Tschacher, Omar Carlo Gioacchino Gelo, Sabine C Koch, 2016-04-11 In an attempt to cease from reducing the world and its emergent phenomena to linear modeling and analytic dissection Dynamic Systems Theories DST and Embodiment theories and methods aim at accounting for the complex dynamic and non linear phenomena that we constantly deal with in psychology For instance DST and Embodiment can enrich psychology's understanding of the communicative process both in clinical and non clinical settings In psychotherapy an important amount of research has shown that next to other ingredients the therapeutic relationship is the most important active factor contributing to psychotherapy outcome These findings give communication a central role in the psychotherapy process In the traditional view the underlying model of understanding psychotherapy processes is that of a number of components summatively coming together enabling us to make a linear causal prediction Yet communication is inherently dynamic A shift to viewing the communication process in psychotherapy as a field dynamic phenomenon helps us to take into account nonlinear phenomena such as feedback processes within and between persons We thus propose an embodied enactive dynamic systems view as a new theoretical and methodological perspective that can more realistically capture what happens among and between two persons in psychotherapy This view reaches beyond the current narrow model of psychotherapy research DST and Embodied Enactive Approaches can offer solutions to the loss of non linear phenomena the complex dynamics of reality and the holistic level of analysis DST and Embodied Enactive Approaches have developed not in a single discipline but in a joined movement based on various fields such as physics biology robotics anthropology philosophy linguistics neuroscience and psychology and have only recently entered clinical theorizing The two new paradigms have already triggered a rethinking of the therapeutic exchange by recognizing the embodied nature of psychological and communicative phenomena Their integration opens up a promising scenario in the field of psychotherapy research developing new profoundly transdisciplinary theoretical concepts methodologies and standards of knowledge The notion of field dynamics enables us to account for the role of the communicational context in the regulation of intra psychological processes while at the same time avoiding the pitfalls of an ontologization of the hierarchy of systemic organization Moreover the new approach implements methodological strategies that can transcend the conventional opposition between idiographic and nomothetic sciences

perception *Miscarriages of Justice in Canada* Kathryn M. Campbell,2018-06-12 Innocent people are regularly convicted of crimes they did not commit A number of systemic factors have been found to contribute to wrongful convictions including eyewitness misidentification false confessions informant testimony official misconduct and faulty forensic evidence In *Miscarriages of Justice in Canada* Kathryn M Campbell offers an extensive overview of wrongful convictions bringing together current sociological criminological and legal research as well as current case law examples For the first time information on all known and suspected cases of wrongful conviction in Canada is included and interspersed with discussions of how wrongful convictions happen how existing remedies to rectify them are inadequate and how those who have been victimized by these errors are rarely compensated Campbell reveals that the causes of wrongful convictions are in fact avoidable and that those in the criminal justice system must exercise greater vigilance and openness to the possibility of error if the problem of wrongful conviction is to be resolved **Confidential Informants** Jon Shane,2015-09-19 While

confidential informants CI s can play a crucial role in police investigations they also have the potential to cause great harm if they are dishonest The process by which police agencies qualify a CI to work and the strength of agency policy may be the source of the problem This Brief examines the integrity problem involving CIs in police operations within the United States provides an overview of pitfalls and problems related to veracity and informant integrity including the difficulties in detecting when a CI is lying and compares the provisions of actual published police policy to the model CI policy published by the International Association of Chiefs of Police IACP The analysis shows a wide divergence between actual police policy and the national standard promulgated by the IACP The Brief provides policy recommendations for improving use of CIs that can potentially reduce or eliminate integrity problems that can lead to organizational accidents such as wrongful arrests and convictions injuries or deaths Some Courts have issued measures to ensure that information received from CIs is reliable by examining sworn testimony and documents related to their work However as this Brief explores this judicial effort arises only after a police operation has taken place and the use of force even deadly force has already been employed The author proposes integrity testing beforehand which would allow police to have a greater understanding of a CI s motivation ability and veracity when conducting law enforcement operations In addition there are aspects of police policy that can enhance CI management such as training supervision and entrapment that can further guard against integrity problems Although integrity testing is not flawless it does interpose an additional step in the CI management process that can help guard against wrongful conviction and perjury that harms the judicial process **Rehabilitation Research - E-Book** Catherine H.
