Key topics covered include the evolution of data libraries and data archives; handling data compared to other forms of information; managing and curating data to ensure effective use and longevity; how to incorporate data literacy into mainstream library instruction and information literacy training; how to develop an effective institutional research data management (RDM) policy and infrastructure; how to support and review a data management plan (DMP) for a project, a key requirement for most research funders; approaches for developing, managing and promoting data repositories; handling and sharing confidential or sensitive data; supporting open scholarship and open science; ensuring data are discoverable, accessible, intelligible and assessable. This title is for the practising data librarian, possibly new in their post with little experience of providing data support. It is also for managers and policy makers, public service librarians, research data management coordinators and data support staff. It will also appeal to students and lecturers in iSchools and other library and information degree programmes where academic research support is taught.
