Newton, 2014-03-05 Are emotions good or bad for thinking and learning Have you ever wondered why a good lesson of one year falls flat in another Why do students behave the way they do Teachers are expected to foster productive thought yet the neglect of emotion in the classroom in favour of intellect means teaching and learning is often not as effective as it might be Thinking with Feeling explores what we mean by productive thought its interrelationship with mood and emotions how teachers can manage that interaction to improve teaching and learning and what teacher trainers could do about it Synthesising the most important international research in the field it offers a framework for productive purposeful thought deduction understanding creative thinking wise thinking and critical thinking and explains how mood and emotion can support and also impede learning It considers the effect of the interplay of emotion and intellect on classroom behaviour on students public performance and performance in tests and how emotional labour can affect the teacher Illustrated with examples from practice this challenging thoughtful study offers education professionals a basis for understanding the interaction of emotions and cognition and making it a successful partnership in order to improve teaching and learning

Bryk,Louis M.

Gomez,Alicia Grunow,Paul G. LeMahieu,2015-03-01 As a field education has largely failed to learn from experience Time after time promising education reforms fall short of their goals and are abandoned as other promising ideas take their place In Learning to Improve the authors argue for a new approach Rather than implementing fast and learning slow they believe educators should adopt a more rigorous approach to improvement that allows the field to learn fast to implement well Using ideas borrowed from improvement science the authors show how a process of disciplined inquiry can be combined with the use of networks to identify adapt and successfully scale up promising interventions in education Organized around six core principles the book shows how networked improvement communities can bring together researchers and practitioners to accelerate learning in key areas of education Examples include efforts to address the high rates of failure among students in community college remedial math courses and strategies for improving feedback to novice teachers Learning to Improve offers a new paradigm for research and development in education that promises to be a powerful driver of improvement for the nation s schools and colleges *Linking Perception and Cognition* Michela C. Tacca,2013 Perception and cognition are tightly related As our primary mode of contact with the world perception is the informational and causal foundation of our cognitive processes it is fundamental to our empirical thinking believing and action planning Traditional accounts of the mind consider perception and cognition to be distinct yet highly interrelated systems Much interdisciplinary empirical and theoretical work from cognitive scientists and philosophers has attempted to elucidate the complex relations holding among these systems suggesting the existence not only of influences of perception on cognition but also vice versa However many questions are left unanswered Given that perception is a guide to our thinking about and acting upon the world appropriately the two systems must be able to talk to one another information carried by perception must be of a form adequate to be taken in by our various cognitive systems The question arises What kinds of structural similarities must hold between perceptual and cognitive representations for such communication to be possible And how exactly do perceptual and cognitive representations interact Some researchers have argued that the links between perception and cognition are so tight as to instill doubt as to the significance of the distinction between the two systems in the first place Yet others insist that perception and cognition remain distinct The aim of this Research Topic is to deepen our understanding of the kinds of interaction among perception and cognition and of the nature of the representational structures that would enable such interaction Provided by publisher **Scientific and Technical Aerospace Reports** ,1995 Physical Science ,1981
