

CHAPTER 1: BREEDS AND BREEDING SYSTEM

The performance of a pig is influenced by its environment and its genetic potential.

On the average, 70% of the performance of the animal could be attributed to its environment such as nutrition and feeding, housing, health, management practices and climate and 30% to its genetic potential. Hence, it is also important for us to look into the blood line of the animals. Each breed has its own set of characteristics which differentiates it from other breeds.

"What is the best breed of pig?". This is the most commonly asked question by pig raisers and as such, there is no best breed. Each breed has its own good and bad characteristics. A farmer can choose the proper breed to use depending on the type of production that he wants to attain and his view on what is an ideal pig. It is up to the pig raiser to decide on which breed to use.

Chapter I deals with the different exotic and local breeds common in the Philippines . The characteristics of each breed are also described to differentiate one from the other, along with their photos.

This chapter also presents the breeding systems and the advantages and disadvantages of each system. Examples are also given to illustrate how the system works.

Genetic improvement in pig farms leads to production of quality finishers and birth of large, vigorous litters.
