## Royal Navy Gunnery Manual:

*The Boy's Manual of Seamanship and Gunnery* C. Burney (Captain.),1867      **Naval AntiAircraft Guns and Gunnery** Norman Friedman,2014-02-15 This book does for naval anti aircraft defense what Friedman s *Naval Firepower* did for surface gunnery it makes a highly complex but historically crucial subject accessible to the layman It traces the growing aerial threat from its inception in WWI and the response of each of the major navies down to the end of WWII highlighting in particular the underestimated danger from dive bombing The work considers what effective AA fire control required and how well each navy s systems actually worked analyzing the weapons how they were placed on ships and how this reflected the tactical concepts of naval AA defense All important guns directors and electronics are represented in close up photos and drawings and lengthy appendices detail their technical data It is simply another superb contribution to naval technical history by its leading exponent      **The Royal Navy List** ,1880      **Royal Navy List** ,1906      *The Boy's Manual of Seamanship and Gunnery* Charles Burney (Captain.),1871      **Text book of gunnery, by G.Mackinlay. 1883,87 [with] Gunnery tables; 97 [with] Gunnery tables; 1902; 07 (pt.1) [with] Ballistic tables** War office,1887      **Naval Firepower** Norman Friedman,2013-08-20 An in depth history of naval battleship firepower from before World War I to the end of World War II by America s leading naval analyst For more than half a century the big gun was the arbiter of naval power but it was useless if it could not hit the target fast and hard enough to prevent the enemy doing the same Because the naval gun platform was itself in motion finding a firing solution was a significant problem exacerbated when gun sizes increased fighting ranges lengthened and seemingly minor issues like wind velocity had to be considered To speed up the process and eliminate human error navies sought a reliable mechanical calculation This heavily illustrated book outlines for the first time in layman s terms the complex subject of fire control as it dominated battleship and cruiser design from before World War I to the end of the dreadnought era Covering the directors range finders and electro mechanical computers invented to solve the problems author Norman Friedman explains not only how the technology shaped and was shaped by the tactics involved but also analyzes their effectiveness in battle His examination of the controversy surrounding Jutland and the relative merits of competing fire control systems draws surprising conclusions He also reassesses many other major gun actions such as the battles between the Royal Navy and the Bismarck and the U S Navy actions in the Solomons and at Surigao Strait All major navies are covered and the story concludes at the end of World War II with the impact of radar

**The Kaiser's Cruisers, 1871-1918** Aidan Dodson,2023-01-04 While bookshelves groan with works on the capital ships of the German Third Reich there is little in English devoted to their predecessors of the Second Reich so this new book will fill a clear gap in its study of German cruisers of the period from wooden hulled corvettes through the fusion of overseas and home vessels into the modern small cruisers that evolved and fought in the First World War The book covers the full range of cruising vessels operated or ordered by the Imperial German Navy between 1871 and 1918 excluding the large cruisers

previously covered by the author's companion volume *The Kaiser's Battlefleet*. These include corvettes, avisos, sloops, torpedo cruisers, III and IV class cruisers and small cruisers and are described and arranged in a chronological narrative. This includes both design and operational histories, the latter continuing down to the end of ships' service after the fall of Imperial Germany and it is accompanied by an extensive selection of many rare photographs. The ships' technical details are tabulated in the second half of the book which also includes sketches of ships' internal layouts and armour and changes in appearance over time. The authors have made extensive use of archival material particularly relating to the political and technical background to design and procurement and present a developmental history of this ship class which is unique in the English language. It will have huge appeal to all those with an interest in the German navy and to those who have been waiting avidly for the sequel to *The Kaiser's Battlefleet*.     *The Boy's Manual of Seamanship and Gunnery, Compiled for the Use of the Training Ships of the Royal Navy* Charles BURNEY (Staff-Commander, R.N.), 1871

**Warship 2017** Stephen Dent, 2017-06-15  
Warship 2017 is devoted to the design, development and service history of the world's combat ships. Featuring a broad range of articles from a select panel of distinguished international contributors, this latest volume combines original research, new book reviews, warship notes, an image gallery and much more to maintain the impressive standards of scholarship and research from the field of warship history. This 39th edition features the usual range of diverse articles spanning the subject by an international array of expert authors.     *Debrett's Illustrated Peerage and Baronetage, Titles of Courtesy and the*

Laughton, Roger Charles Anderson, William Gordon Perrin, 1925     **British Naval Swords and Swordsmanship** Mark Barton, John McGrath, 2013-07-03. This new publication is intended to bring together a mass of research dealing with all aspects of British naval swords. Unlike the much sought after *Swords of Sea Service* by May and Annis, this work offers a far broader coverage and for the first time the complete story of swords and swordsmanship is presented in one concise volume. While the swords themselves are described, the authors also tell the story of naval swordsmanship. For example, subjects such as how swords and cutlasses were used in action and how training was conducted and covered. The authors also address how the use of swords developed into a sport in the Navy and how swords and swordsmanship may have entered naval symbology in such areas as ships' names. Many current myths are addressed and corrected and the story is brought right up to date with information on the sport from 1948 to 2000. While the book concentrates on the Royal Navy, foreign weapons including those of the Irish Naval Service are mentioned where appropriate. Other British Maritime organisations such as the Merchant Navy, the Customs and Coastguard Services and the Reserves are also addressed. The book also covers subjects such as dating, collecting and conservation of swords and re-examines those swords attributed to Nelson. The Appendices include the first list of Swords of Peace awarded to naval units to be published. Recent research by the authors is also

reflected in the updated lists of Patriotic Fund Awards City of London Swords and Naval fencing champions contained in the Appendixes The comprehensive nature of the work has not been attempted before and the book will appeal to a wide range of naval enthusiasts and historians collectors of weapons fencers and re enactors      Subject Index of the Modern Works Added to the Library of the British Museum in the Years ...
