**Abstract**—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and blood pressure (BP) of sedentary, middle-aged men. The subjects were divided into two groups: a control group and an exercise group. The exercise group performed a 12-week training program consisting of three sessions per week of aerobic exercise. The control group did not exercise. The HR and BP were measured at baseline and at the end of the 12-week training program. The results showed that the exercise group had a significant decrease in HR and BP compared to the control group. The HR decreased from 72 to 68 beats per minute, and the BP decreased from 120/80 to 110/70 mmHg. The control group showed no significant change in HR and BP. These results suggest that a 12-week training program can effectively reduce HR and BP in sedentary, middle-aged men.

If gross revenues are  $T$  (in pounds), then the contribution margin (ignoring tax and depreciation) is  $T - \text{fixed costs}$ . If the contribution margin is  $Q$  (in £), then the contribution margin ratio is  $Q/T$  (in %).

- When a producer's price for the output rises or falls, it must adjust its output level accordingly. A rise in the price of the output will cause a producer to produce more output, and a fall in the price of the output will cause a producer to produce less output.
