Low-carbon, Sustainable Future in East Asia Soo-Cheol Lee, Hector Pollitt, Seung-Joon Park, 2015-08-27 East Asia is a key region in the global economy including both the second and third largest global economies already and led by China continuing to expand at a rapid rate This economic growth has led to unprecedented gains in prosperity in the region but it has also led to increasing environmental pressures and energy issues This book assesses ways in which East Asia can continue or even increase existing rates of economic growth while at the same time reducing greenhouse gas emissions and other environmental degradation Using advanced modelling approaches future scenarios for four East Asian countries are assessed in detail including analysis of particular challenges in each country e.g. coal power in China nuclear power in Japan Prospects for each country's energy system are assessed in detail and the potential effects of various types of Environmental Tax Reform in the four countries are also considered carefully The final section of the book explores the interaction between trade liberalization a key driver of growth and emission levels in the East Asia region

Forest Conservation and Sustainability in Indonesia Bernice Maxton-Lee, 2020-03-20 Despite carefully constructed conservation interventions deforestation in Indonesia is not being stopped This book identifies why large scale international forest conservation has failed to reduce deforestation in Indonesia and considers why key stakeholders have not responded as expected to these conservation interventions The book maps the history of deforestation

in Indonesia in the context of global political economy exploring the relationship between international trade the interests and ideology behind global sustainability programmes and the failures of forest conservation in Indonesia Global economic and political ideologies are shown to have profoundly shaped deforestation The author argues that the same forces continue to prevent positive outcomes Case study chapters analyse three major international programmes Reducing Emissions from Deforestation and Forest Degradation REDD the Norway Indonesia bilateral partnership and the Roundtable on Sustainable Palm Oil RSPO in Indonesia The findings provide insight into the failures of global climate change policy and suggest how the book's theoretical model can be used to analyse other complex environmental problems The book is a useful reference for students of environmental science and policy political theory international relations development and economics It will also be of interest to forestry professionals and practitioners working in NGOs

Rivers form one of the lifelines in our society by providing essential services such as availability of fresh water navigation energy ecosystem services and flood conveyance. Because of this essential role mankind has interfered continuously in order to benefit most and at the same time avoid adverse consequences such as flood risk and droughts. This has resulted in often highly engineered rivers with a narrow set of functions. In the last decades rivers are increasingly considered in a more holistic manner as a system with a multitude of interdependent processes. River research and engineering has therefore added to the river fundamentals also themes like ecohydraulics consequences of climate change and urbanisation. River Flow 2020 contains the contributions presented at the 10th conference on Fluvial Hydraulics. River Flow 2020 organised under the auspices of the Committee on Fluvial Hydraulics of the International Association for Hydro Environment Engineering and Research IAHR. What should have been a lively physical gathering of researchers students and practitioners was converted into an online event as the COVID 19 pandemic hindered international travelling and large gatherings of people. Nevertheless the fluvial hydraulics community showed their interest and to be very much alive with a high number of participations for such event. Since its first edition in 2002 in Louvain la Neuve this series of conferences has found a large and loyal audience in the river research and engineering community while being also attractive to the new researchers and young professionals. This is highlighted by the large number of contributions applying for the Coleman award for young researchers and also by the number of applications and attendants to the Master Classes which are aimed at young researchers and students. River Flow 2020 aims to provide an updated overview of the ongoing research in this wide range of topics and contains five major themes which are focus of research in the fluvial environment: river fundamentals the digital river the healthy river extreme events and rivers under pressure. Other highlights of River Flow 2020 include the substantial number of interdisciplinary subthemes and sessions of special interest. The contributions will therefore be of interest to academics in hydraulics hydrology and environmental engineering as well as practitioners that would like to be updated about the newest findings and hot themes in river research and engineering.

Environmental Health - Theory and Practice Ramesha

Chandrappa, Diganta Bhusan Das, 2020-12-28. This two volume work discusses environmental health the branch of public health concerned with all aspects of the natural and built environment affecting human health and addresses key issues at the global and local scales. The work offers an overview of the methodologies and paradigms that define this burgeoning field ranging from ecology to epidemiology and from pollution to environmental psychology and addresses a wide variety of global concerns including air quality water and sanitation food security chemical physical hazards occupational health disease control and injuries. The authors intend to provide up to date information for environmental health professionals and to provide a reference for students and consultants working at the interface between health and environmental sectors. Volume 1 focuses on discussing the fundamentals of physical chemical and biological sciences in an environmental health context and introduces the key concepts that bridge environmental health and medical sciences to accurately inform both environmental

and medical professionals The book addresses different specializations in medical science that account for environmental health issues and aims to reduce the knowledge gap among professionals on public health topics such as pollution impacts occupational hazards radiation exposure natural disasters and climate change [African Handbook of Climate Change Adaptation](#) Nicholas Oguge, Desalegn Ayal, Lydia Adeleke, Izael da Silva, 2021-05-20 This open access book discusses current thinking and presents the main issues and challenges associated with climate change in Africa It introduces evidences from studies and projects which show how climate change adaptation is being and may continue to be successfully implemented in African countries Thanks to its scope and wide range of themes surrounding climate change the ambition is that this book will be a lead publication on the topic which may be regularly updated and hence capture further works Climate change is a major global challenge However some geographical regions are more severely affected than others One of these regions is the African continent Due to a combination of unfavourable socio economic and meteorological conditions African countries are particularly vulnerable to climate change and its impacts The recently released IPCC special report Global Warming of 1.5°C outlines the fact that keeping global warming by the level of 1.5°C is possible but also suggested that an increase by 2.0°C could lead to crises with crops agriculture fed by rain could drop by 50% in some African countries by 2020 and livestock production could damage water supplies and pose an additional threat to coastal areas The 5th Assessment Report produced by IPCC predicts that wheat may disappear from Africa by 2080 and that maize a staple will fall significantly in southern Africa Also arid and semi arid lands are likely to increase by up to 8% with severe ramifications for livelihoods poverty eradication and meeting the SDGs Pursuing appropriate adaptation strategies is thus vital in order to address the current and future challenges posed by a changing climate It is against this background that the African Handbook of Climate Change Adaptation is being published It contains papers prepared by scholars representatives from social movements practitioners and members of governmental agencies undertaking research and or executing climate change projects in Africa and working with communities across the African continent Encompassing over 100 contributions from across Africa it is the most comprehensive publication on climate change adaptation in Africa ever produced **The Art of Uncertainty** David Spiegelhalter, 2025-03-04 Named a Best Book of the Year by Forbes and The Economist From our greatest living statistical communicator Tim Harford comes an invaluable data driven guide for understanding and learning to embrace risk and uncertainty in our daily lives How dangerous is our diet How much of sports falls into the realm of luck When authorities categorize a given event as highly likely how likely is that really Whether we're trying to decide if the benefits of a new medication are worth the chance of side effects or if artificial intelligence truly threatens humanity our lives are riddled with uncertainties both everyday and existential yet it can be difficult to know how to properly weigh all those unknowns Luckily for us renowned statistician David Spiegelhalter has spent his career dissecting data to resolve the apparently random and decode the many decisions we face with imperfect information In The Art of Uncertainty he shows how we can become better

at dealing with what we don't know to make smarter choices in a world so full of puzzling variables. In lucid, lively prose Spiegelhalter guides us through the principles of probability, illustrating how they can help us think more analytically about everything from medical advice to sports to climate change forecasts. He demonstrates how taking a mathematical approach to phenomena we might otherwise attribute to fate or luck can help us sort hidden patterns from mere coincidences, better evaluate cause and effect, and predict what's likely to happen in the future. Along the way, we learn how a misinterpretation of a probability contributed to the infamous Bay of Pigs fiasco, why a ship twice the size of the Titanic sank without a trace, and why we can be so confident that no two properly shuffled decks of cards have ever been in the same order. Sparkling with wit and fascinating real-world examples, this is an essential guide to navigating uncertainty while also retaining the humility to admit what we don't or simply cannot know.

Police Procedure and Evidence in the Criminal Justice System Barrie Archer, George Ellison, 2025-02-28. Police procedure and evidence brought to life. A key text for all those on policing degree or other pre-join routes. This book examines police procedure and evidence in the criminal justice system, providing clear and accessible information while encouraging analysis and reflection. Chapters cover police powers, stop and search, arrest and custody, disposals, court procedures, and disclosure and rehabilitation. Uniquely, it follows the journey of a fictional family who, in one way or another, become involved in the criminal justice system, allowing students to consider a range of possible options and outcomes and bringing the theory to life.
