Designs for Science Literacy American Association for the Advancement of Science, 2001-03-22 The call for science curriculum reform has been made over and over again for much of the twentieth century Arguments have been made that the content of the curriculum is not appropriate for meeting the individual and social needs of people living in the modern world that the curriculum has become overstuffed with topics and does not serve students especially well and above all that the curriculum does not generate the student learning it is expected to produce The latest volume in a continuing series of publications from the AAAS designed to reform science education Designs for Science Literacy presupposes that curriculum reform must be considerably more extensive and fundamental than the tinkering with individual courses and subjects that has been going on for decades Designs deals with the critical issues involved in assembling sound instructional materials into a new coherent K 12 whole The book pays special attention to the need to link science oriented studies to the arts and humanities and also proposes how to align the curriculum with an established set of learning goals while preserving the American tradition of local responsibility for the curriculum itself If fundamental curriculum reform is ever to occur a new process for creating alternatives will have to be developed Designs for Science Literacy provides the groundwork for such a process

To Look Closely Laurie Rubin, 2023-10-10 Whether it's a trickling stream, a grassy slope, or an abandoned rail line, the natural world offers teachers a wonderful resource around which to center creative inquiry-based learning throughout the year. Nobody knows this better than veteran teacher Laurie Rubin. In *To Look Closely: Science and Literacy in the Natural World*, she demonstrates how nature study can help students become careful, intentional observers of all they see, growing into stronger readers, writers, mathematicians, and scientists in the process. Laurie invites you to join her class of twenty-one second graders as they visit a small stream in the woods behind a suburban elementary school and she shares her reflections on class discussions, activities, and learning experiences. From setting a tone of inquiry-based thinking in the classroom to suggesting specific units of study for reading, writing, and science, Laurie guides teachers step by step through the basics of how to integrate the skills acquired through nature study into every subject. You will also discover all the ways this purposeful work nurtures green citizens who grow up determined to value and protect the natural environment. Filled with student journal entries, narratives, and poems inspired by experiences in the natural world, *To Look Closely* will inspire and encourage you to become a careful observer of your own site spots outdoors and embrace nature study for a year or for whatever part of a year is possible for you. This book will change the way you view the world. *Museums and Art Galleries as Educational Agents* Ernest Charles Chubb, 1929 This report is based upon a visit to the Museum and Art Galleries of the United States of America and Canada undertaken for the purpose of studying their organization, the methods employed in displaying exhibits, and especially their educational activities. **Research Methods for Psychological Science** William J. Ray, 2021-07-21 Presents key topics with an emphasis on experimental research and logic. Students will learn the importance of developing testable hypotheses, how to evaluate new information critically, and the impact of research on ourselves and our society. **Publishers' circular and booksellers' record**, 1895 [The Triumph of Seeds](#) Thor Hanson, 2015-03-24 As seen on PBS's *American Spring LIVE*, the award-winning author of *Buzz* and *Feathers* presents a natural and human history of seeds, the marvels of the plant kingdom. The genius of Hanson's fascinating, inspiring, and entertaining book stems from the fact that it is not about how all kinds of things grow from seeds; it is about the seeds themselves. Mark Kurlansky, *New York Times Book Review*. We live in a world of seeds. From our morning toast to the cotton in our clothes, they are quite literally the stuff and staff of life, supporting diets, economies, and civilizations around the globe. Just as the search for nutmeg and pepper drove the Age of Discovery, coffee beans fueled the Enlightenment, and cottonseed sparked the Industrial Revolution. Seeds are fundamental objects of beauty, evolutionary wonders, and simple fascinations. Yet despite their importance, seeds are often seen as commonplace, their extraordinary natural and human histories overlooked. Thanks to this stunning new book, they can be overlooked no more. This is a book of knowledge, adventure, and wonder, spun by an award-winning writer with both the charm of a fireside storyteller and the hard-won expertise of a field biologist. A fascinating scientific adventure, it is essential

artifacts of the New World's earliest human inhabitants to buffalo jumps where Native Americans once ran buffalo over cliffs by the thousands to the Detroit Carbon works a bone charcoal plant that made fortunes in the late 1800s by turning millions of tons of buffalo bones into bone meal black dye and fine china and even to an abattoir turned fashion mecca in Manhattan's Meatpacking District where a depressed buffalo named Black Diamond met his fate after serving as the model for the nickel. Both a captivating narrative and a book of environmental and historical significance *American Buffalo* tells us as much about ourselves as it does about the creature who perhaps best of all embodies the American ethos.
