Prepare sample

If the object is reflective or transparent, applying a powder to it prior to scanning may yield a more accurate scan of the surface.

Start program

Go to Start>All Programs>NextEngine>Scan Studio HD (folder)>Scan Studio HD

Alternatively, it may be available from the Start menu as a shortcut.

The NextEngine User Manual is in

Start>All Programs>NextEngine>Scan Studio HD (folder)>User ManualHD

Position sample

The rotating pad has an arm mounted to it that can hold a sample in place. The upper piece need not be used if the sample can stand up on its own, and will not fall over when or if the base moves. If the object could fall or otherwise shift, use the upper arm to fix the object in place. One knob will let the gripping piece rotate, the other will let the arm slide on the vertical rod. Adjust these to your preference then tighten to fix the arm in place. Alternatively, an object that can be pierced can be mounted on a small spike attachment. The holding arm can be removed by unscrewing it from the rotating base, and a threaded hole in the middle of the base can hold the spike or other base object (alternative options are two small stands and a smooth metal disk).

Align the object on the scanning platform. Use the viewing window to position the object so that it is visible within the scanning field (the on screen viewing window).
