Scientific Foundations and Practical Applications of Periodization G. Gregory Haff, 2024-02-26 The concept of periodization is not new with the precursors of periodized training dating back more than 2 000 years ago. But it is now obvious that the holistic development of an athlete encompasses more than their physical and tactical training. Scientific Foundations and Practical Applications of Periodization is the first book of its kind designed to optimize sport performance by integrating both classic and modern periodization theories with recovery methodologies, nutritional interventions, and athlete monitoring guidelines. Written by G. Gregory Haff, a world leading expert on periodization, Scientific Foundations and Practical Applications of Periodization incorporates the latest scientific evidence to provide a comprehensive understanding of how to implement planning and programming strategies to enhance physiological adaptations. While other periodization books may discuss training theory, few provide information on how to integrate various training models into the periodization process. Here are just some of the approaches incorporated into Scientific Foundations and Practical Applications of Periodization: Employing and blending parallel, sequential, and emphasis periodization models to develop athletes; Syncing recovery strategies with various phases and periods of training to enhance the adaptational process; Manipulating nutritional strategies to magnify performance; Using and interpreting monitoring data to adjust an athlete's program in accordance with the periodized plan. Applicable for athletes at all levels and in any sport, Scientific Foundations and Practical Applications of Periodization translates the latest research into usable information that directly enhances programming. You will have access to real world practical examples and discussions of how to make scientifically sound programming decisions. A glossary of over 400 terms will help you digest the content. Plus you will find periodization templates and directions on how to use them to create annual training mesocycle and microcycle plans. Templates are provided online via HKPropel to help you easily design periodized programs.
