presents today's most complete coverage of performing, interpreting and reporting post mortem examinations. In addition to discussing the basics of the specialty, this lasting and useful reference features information on the performance of specialized autopsy procedures. The material is divided into two sections for ease of use: a manual covering specific autopsy procedures, biosafety, generation of autopsy reports, preparation of death certificates and other essential subjects; and an atlas organized by organ system that captures the appearance of the complete spectrum of autopsy findings. The updated second edition features a new chapter on the popular topic of forensic pathology. Focuses on hospital autopsy while also providing a brief introduction to forensic autopsy. Examines autopsy photography and radiology, microscopic examination, supplemental laboratory studies and other investigative approaches. Includes a chapter on performing special dissection procedures that are usually not covered during a typical residency. Presents over 590 full color photographs depicting common gross and microscopic autopsy findings for every part of the body. Correlates pathologic findings with their clinical causes to enhance diagnostic accuracy. Covers the hot topic of forensic pathology in a new chapter introducing the subspecialty. Addresses the latest legal, social and ethical issues as well as quality improvement and quality assurance. Features improved images in the Atlas section to give an even more useful visual reference.

Ronald H. Rozensky, Jerry J. Sweet, Steven M. Tavian, 2013-06-29 For two decades I have been responding to questions about the nature of health psychology and how it differs from medical psychology, behavioral medicine and clinical psychology. From the beginning I have taken the position that any application of psychological theory or practice to problems and issues of the health system is health psychology. I have repeatedly used an analogy to Newell and Simon's General Problem Solver program of the late 1950s and early 1960s which had two major functional parts in addition to the executive component. One was the problem solving core, the procedural competence; the other was the representation of the problem environment. In the analogy, the concepts, knowledge and techniques of psychology constitute the core competence; the health system in all its complexity is the problem environment. A health psychologist is one whose basic competence in psychology is augmented by a working knowledge of some aspect of the health system. Quite apparently, there are functionally distinct aspects of health psychology to the degree that there are meaningful subdivisions in psychological competence and significantly different microenvironments within the health system. I hesitate to refer to them as areas of specialization as the man who gave health psychology its formal definition, Joseph Matarazzo, has said that there are no specialties in psychology. Cited in the editors' preface to this book.
