Gender and Climate Change Joane Nagel, 2025-08-05 Does gender matter in global climate change This timely and provocative book takes readers on a guided tour of basic climate science then holds up a gender lens to find out what has been overlooked in popular discussion research and policy debates We see that around the world more women than men die in climate related natural disasters the history of science and war are intimately interwoven masculine occupations and preoccupations and conservative men and their interests drive the climate change denial machine We also see that climate policymakers who embrace big science approaches and solutions to climate change are predominantly male with an ideology of perpetual economic growth and an agenda that marginalizes the interests of women and developing economies The book uses vivid case studies to highlight the often surprising gendered impacts of climate changes This new edition is a thorough update that includes revised and new chapters and new material that takes account of the significant advances in climate research environmental and social theory and the many political and social challenges posed in the wake of US elections Covid 19 pandemic and rapidly changing climate and environment The new edition also takes account of important social and cultural movements that resist challenges to women's rights and advocate for gender sexuality and racial justice This book will appeal to students researchers and academicians interested in environmental studies and gender studies It also will be of interest to policymakers activists and others involved with environmental policy and governance **Cost, Effectiveness,**

The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway,Claire M. Zedelius,Jonathan W. Schooler,Simon Grondin,2015-07-02 Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions

have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of prospection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about time and temporal phenomena at long and or short time scales
