What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes,2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description

The Soul of Genius Jeffrey Orens,2021-07-06 A prismatic look at the meeting of Marie Curie and Albert Einstein and the impact these two pillars of science had on the world of physics which was in turmoil In 1911 some of the greatest minds in science convened at the First Solvay Conference in Physics a meeting like no other Almost half of the attendees had won or would go on to win the Nobel Prize Over the course of those few days these minds began to realize that classical physics was about to give way to quantum theory a seismic shift in our history and how we understand not just our world but the universe At the center of this meeting were Marie Curie and a young Albert Einstein In the years preceding Curie had faced the death of her husband and soul mate Pierre She was on the cusp of being awarded her second Nobel Prize but scandal erupted all around her when the French press revealed that she was having an affair with a fellow scientist Paul Langevin The subject of vicious misogynist and xenophobic attacks in the French press Curie found herself in a storm that threatened her scientific legacy Albert Einstein proved an supporter in her travails They had an instant connection at Solvay He was young and already showing flourishes of his enormous genius Curie had been responsible for one of the greatest discoveries in modern science radioactivity but still faced resistance and scorn Einstein

recognized this grave injustice and their mutual admiration and respect borne out of this their first meeting would go on to serve them in their paths forward to making history Curie and Einstein come alive as the complex people they were in the pages of *The Soul of Genius* Utilizing never before seen correspondence and notes Jeffrey Orens reveals the human side of these brilliant scientists one who pushed boundaries and demanded equality in a man's world no matter the cost and the other who was destined to become synonymous with genius

Conscious Action Theory Wolfgang Baer, 2019-11-20 Conscious Action Theory provides a logical unification between the spirit and the material by identifying reality as an event that processes personal experiences into explanatory memories from which personal experiences are regenerated in a never ending cycle of activity

Baer explores the idea that our personal feelings are undeniable facts that have been systematically excluded from the basic sciences thereby leaving us with a schizophrenic division between objective materialism and spiritual idealism Cognitive Action Theory CAT achieves this unification by recognizing that the observer's existence is the foundational premise underlying all scientific inquiry It develops as an event oriented physical theory in which the first person observer is central By analyzing the methods through which we human observers gain knowledge and create the belief systems within which our experiences are explained we discover a fundamental truth all systems are observers and exhibit some form of internal awareness Events not the objects appearing in them are the fundamental building blocks of reality The book is comprised of three parts the first addresses the paradigm shift from an object to an event oriented world view the second develops the foundations of action physics for an event oriented world view and the third provides examples of how these new ideas can be applied to move our knowledge up the next evolutionary step of human development This book will benefit anyone questioning their role in the universe especially those in interdisciplinary fields of philosophy psychology neuroscience and medicine who seek understanding of quantum theory as the physics of conscious systems that know the world **Climate**

Change, Hazards and Adaptation Options Walter Leal Filho, Gustavo J. Nagy, Marco Borga, Pastor David Chávez Muñoz, Artur Magnuszewski, 2020-02-14 This book addresses the issue of climate change risks and hazards holistically Climate change adaptation aims at managing climate risks and hazards to an acceptable level taking advantage of any positive opportunities that may arise At the same time developing suitable responses to hazards for communities and users of climate services is important in ensuring the success of adaptation measures But despite this knowledge about adaptation options including possible actions that can be implemented to improve adaptation and reduce the impacts of climate change hazards is still limited Addressing this need the book presents studies and research findings and offers a catalogue of potential adaptation options that can be explored It also includes case studies providing illustrative and inspiring examples of how we can adapt to a changing climate The Natriuretic Hormones Harvey Craig Gonick, Vardaman M.

Buckalew, 2015-11-24 The title follows from the original demonstration by Dr Hugh de Wardener in 1961 that a humoral agent is produced after extracellular volume expansion which results in a vigorous diuresis and natriuresis Thus the name of natriuretic hormone was coined In the years that followed several investigators pursued the search for the hormone What resulted however was the discovery of several hormones with different characteristics all of which were natriuretic Initially it was found that the hormone was similar in action to ouabain or digoxin hence the appellation of ouabain like or digoxin like The hormone was found to be an inhibitor of Na K ATPase which would fit with it being a cardiotonic steroid On the other hand neither ouabain or digoxin migrated on Sephadex gel filtration in the same locus as the hormone Other investigators claim to have identified the hormone initially as a vanadium diascorbate later as bufadienolides such as marinobufagenin yet later as a macrocyclic derivative of inorganic carbon suboxide with a molecular weight of 408 Da Some support for the latter

finding was derived from an earlier report that a semi purified Sephadex derived compound was found to have a molecular weight of about 12 000 Da but the active compound when split from its carrier protein had a molecular weight of exactly 408 Da This compound had not been further identified As further development was the demonstration by Bricker and colleagues that a natriuretic substance could be purified from uremic urine This turned out to be a xathurenic acid derivative Meanwhile the focus began to turn to natriuretic peptides derived from heart ANF and BNP These peptides have a shorter duration of action than the cardiotonic steroid like hormone and ANF has proved to be most useful as a measure of heart failure It should also be stressed that marinobufagenin like ANF is elevated in congestive heart failure whereas the steroid like hormone is depressed or absent in this state This review will attempt to describe and contrast the properties of each of the proposed natriuretic hormones including their locus on Sephadex separation potency duration of action chemical structure if known behavior in hypertension renal failure heart failure and brain disease As most recent work has focussed on marinobufagenin this hormone will be brought up to date by investigators in the field
