A History of Scientific Journals Aileen Fyfe, Noah Moxham, Julie McDougall-Waters, Camilla Mørk Røstvik, 2022-10-03

Modern scientific research has changed so much since Isaac Newton's day it is more professional collaborative and international with more complicated equipment and a more diverse community of researchers. Yet the use of scientific journals to report share and store results is a thread that runs through the history of science from Newton's day to ours. Scientific journals are now central to academic research and careers. Their editorial and peer review processes act as a check on new claims and findings and researchers build their careers on the list of journal articles they have published. The journal that reported Newton's optical experiments still exists. First published in 1665 and now fully digital the *Philosophical Transactions* has carried papers by Charles Darwin, Dorothy Hodgkin and Stephen Hawking. It is now one of eleven journals published by the Royal Society of London. Unrivalled insights from the Royal Society's comprehensive archives have enabled the authors to investigate more than 350 years of scientific journal publishing. The editorial management business practices and financial difficulties of the *Philosophical Transactions* and its sibling *Proceedings* reveal the meaning and purpose of journals in a changing scientific community. At a time when we are surrounded by calls to reform the academic publishing system it has never been more urgent that we understand its history.

Live Trace Visualization for System and Program Comprehension in Large Software Landscapes Florian Fittkau, 2015-12-03. In many enterprises the number of deployed applications is constantly increasing. Those applications often several hundreds form large software landscapes. The comprehension of such landscapes is frequently impeded due to for instance architectural erosion, personnel turnover or changing requirements. Furthermore events such as performance anomalies can often only be understood in correlation with the states of the applications. Therefore an efficient and effective way to comprehend such software landscapes in combination with the details of each application is required. In this thesis we introduce a live trace visualization approach to support system and program comprehension in large software landscapes. It features two perspectives: a landscape level perspective using UML elements and an application level perspective following the 3D software city metaphor. Our main contributions are: 1. an approach named ExplorViz for enabling live trace visualization of large software landscapes; 2. a monitoring and analysis approach capable of logging and processing the huge amount of conducted method calls in large software landscapes; and 3. display and interaction concepts for the software city metaphor beyond classical 2D displays and 2D pointing devices. Extensive lab experiments show that our monitoring and analysis approach elastically scales to large software landscapes while imposing only a low overhead on the productive systems. Furthermore several controlled experiments demonstrate an increased efficiency and effectiveness for solving comprehension tasks when using our visualization. ExplorViz is available as open source software on www.explorviz.net. Additionally we provide extensive experimental packages of our evaluations to facilitate the verifiability and reproducibility of our results.

On Non-Generic Finite Subgroups of Exceptional Algebraic Groups Alastair J. Litterick, 2018-05-29 The study of finite subgroups of a simple algebraic group G reduces in a sense to those which are almost simple. If an almost simple subgroup of G has a socle which is not isomorphic to a group of Lie type in the underlying characteristic of G , then the subgroup is called non-generic. This paper considers non-generic subgroups of simple algebraic groups of exceptional type in arbitrary characteristic.
