backup and covers the many options available This section also goes through the best practices to insure that data are not lost Preserving and archiving your data digital data can have a long life if properly cared for This section covers managing data in the long term including choosing good file formats and media as well as determining who will manage the data after the end of the project Sharing publishing your data addresses how to make data sharing across research groups easier as well as how and why to publicly share data This section covers intellectual property and licenses for datasets before ending with the altmetrics that measure the impact of publicly shared data Reusing data as more data are shared it becomes possible to use outside data in your research This chapter discusses strategies for finding datasets and lays out how to cite data once you have found it This book is designed for active scientific researchers but it is useful for anyone who wants to get more from their data academics educators professionals or anyone who teaches data management sharing and preservation An excellent practical treatise on the art and practice of data management this book is essential to any researcher regardless of subject or discipline Robert Buntrock Chemical Information Bulletin **Christopher Nolan** Darren Mooney,2018-10-24 Christopher Nolan is one of the defining directors of the 21st century Few of his contemporaries can compete in terms of critical and commercial success let alone cultural impact His films have a rare ability to transcend audience expectations appealing to both casual moviegoers and dyed in the wool cineastes Nolan s work ranges from gritty crime thrillers Memento Insomnia to spectacular blockbusters the Dark Knight trilogy Inception They have taken audiences from the depths of space Interstellar to the harsh realities of war Dunkirk And they have pushed the boundaries of the possible in modern movie making This critical history covers his complete filmography tracing his career from film student to indie darling to Oscar nominated auteur Managing the NIH Bethesda Campus Capital Assets for Success in a Highly Competitive Global Biomedical Research Environment National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,Board on Infrastructure and the Constructed Environment,Committee on Assessing the Capital Needs of the National Institutes of Health,2019-11-02 The National Institutes of Health NIH is the primary agency of the United States government responsible for biomedical and public health research Founded in the late 1870s NIH has produced extraordinary advances in the treatment of common and rare diseases and leads the world in biomedical research It is a critical national resource that plays an important role in supporting national security The 310 acre Bethesda campus supports some 20 000 employees and contractors and it contains more than 12 million square feet of facilities divided amongst nearly 100 buildings including the largest dedicated research hospital in the world The Bethesda campus supports some of the most sophisticated and groundbreaking biomedical research in the world However while some new state of the art buildings have been constructed in recent years essential maintenance for many facilities and the campus overall has been consistently deferred for many years The deteriorating condition of NIH s built environment is now putting its ability to fulfill its mission at substantial risk Managing the NIH Bethesda Campus s Capital Assets for Success in a Highly Competitive

Global Biomedical Research Environment identifies the facilities in greatest need of repair on the Bethesda campus and evaluates cost estimates to determine what investment is needed for the NIH to successfully accomplish its mission going forward , Science and Technology Education and Communication Maarten C. A. van der Sanden, Marc J. de Vries, 2016-11-25 Science technology education on the one hand and communication on the other are to a large extent still separate worlds and many opportunities for synergy and cross fertilisation are yet unused This divide is unfortunate since educators need communication skills and communicators often use aspects of education in their strategies Moreover innovation processes in both domains ask for education and communication insights and skills Therefore scholars and practitioners in both domains must seek connections and synergy by exchanging insights and ideas This book discusses the shared aims of science technology education and communication such as science literacy and engagement as well as common processes and challenges such as social learning social design and professionalisation and assessment Aims processes and challenges that inspire enhance and deepen the education and communication synergy from a theoretical and practical side If one reads the various chapters and reflects on them from one s own perspective as a scholar or practitioner the question is no longer if cross fertilisation and synergy are needed but when are we seriously going to take up this challenge together This book aims to initiate the dialogue that the situation in the development of the topic requires at this point
