Dissertation Abstracts International ,1970 Farm Engineering ,1914 Formation and Properties of Juvenile Wood in Southern Pines ,2001 To satisfy the increasing demand for forest products much of the future timber supply will be from improved trees grown on managed plantations This fast grown resource will tend to be harvested in short age rotations and will contain higher proportions of juvenile wood than that of current harvests In anticipation of this resource definitive information is needed on the influence of juvenile wood on lumber properties so that grading rules and the associated allowable design stresses can be modified as needed This document reports the results of an extensive review of the literature on juvenile wood in southern pines This report defines and discusses the extent occurrence and characteristics of juvenile wood It reviews the effects that environment and silviculture have on the amount of juvenile wood produced Finally

the impacts that juvenile wood has on mechanical properties were quantified The results of this quantification are significant to all producers of fast grown plantations Research has clearly shown that juvenile wood will have a detrimental impact on allowable design stresses for visually graded lumber It is critical that methods are developed to more carefully manage fast grown plantation wood for its most efficient use This review should serve as an overall collection of knowledge pertaining to juvenile wood research in southern pines and should help in the decision making efforts to improve seedling selection techniques and silvicultural practices to maximize the potential for fast grown plantations of southern pines *General Technical Report FPL* ,1978 **Catalog of Copyright Entries.
