converts them to an electrical signal which can then be amplified recorded and broadcast A magnetic pickup consists of a permanent magnet such as an AlNiCo wrapped with a coil of a few thousand turns of fine enameled copper wire The pickup is most often mounted on the body of the instrument but can be attached to the bridge neck and or pickguard as on many electro acoustic archtop jazz guitars and string basses The vibration of the nearby soft magnetic strings modulates the magnetic flux linking the coil thereby inducing an alternating current through the coil of wire This signal is then carried to amplification or recording equipment via a cable There may also be an internal preamplifier stage between the pickup and cable More generally the pickup operation can be described using the concept of a magnetic circuit in which the motion of the string varies the magnetic reluctance in the circuit created by the permanent magnet The output voltage of pickups varies between 100 mV rms to over 1 V rms for some of the higher output types Measurements taken *Analysis of Electromagnetic Electric Guitar Pickups* Fanuel Tobias Ban,2006
