The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties Steve Chinn, 2014-11-20. Mathematics plays an important part in every person's life, so why isn't everyone good at it? The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties brings together commissioned pieces by a range of hand-picked influential international authors from a variety of disciplines, all of whom share a high public profile. More than fifty experts write about mathematics learning difficulties and disabilities from a range of perspectives and answer questions such as: What are mathematics learning difficulties and disabilities? What are the key skills and concepts for learning mathematics? How will IT help now and in the future? What is the role of language and vocabulary? How should we teach mathematics? By posing notoriously difficult questions such as these and studying the answers, The Routledge International Handbook of Dyscalculia and Mathematical Learning Difficulties is the authoritative volume and is essential reading for academics in the field of mathematics. It is an incredibly important contribution to the study of dyscalculia and mathematical difficulties in children and young adults.

Imagine mathematics imagine with the help of mathematics imagine new worlds new geometries new forms. This volume in the series *Imagine Math* casts light on what is new and interesting in the relationships between mathematics imagination and culture. The book opens by examining the connections between modern and contemporary art and mathematics including Linda D Henderson's contribution. Several further papers are devoted to mathematical models and their influence on modern and contemporary art including the work of Henry Moore and Hiroshi Sugimoto. Among the many other interesting contributions are an homage to Beno t Mandelbrot with reference to the exhibition held in New York in 2013 and the thoughts of Jean Pierre Bourguignon on the art and math exhibition at the Fondation Cartier in Paris. An interesting part is dedicated to the connections between math computer science and theatre with the papers by C Bardainne and A Mondot. The topics are treated in a way that is rigorous but captivating detailed but very evocative. This is an all embracing look at the world of mathematics and culture.
