Reports Awareness Circular : TRAC. ,1989-04 The SECD Microprocessor Brian T. Graham,2012-12-06 This is a milestone
in machine assisted microprocessor verification Gordon 20 and Hunt 32 led the way with their verifications of simple designs
Cohn 12 13 followed this with the verification of parts of the VIPER microprocessor This work illustrates how much these and
other pioneers achieved in developing tractable models scalable tools and a robust methodology A condensed review of
previous research emphasising the behavioural model underlying this style of verification is followed by a careful and
remarkably readable account of the SECD architecture its formalisation and a report on the organisation and execution of
the automated correctness proof in HOL This monograph reports on Graham's MSc project demonstrating that in the right
hands the tools and methodology for formal verification can and therefore should now be applied by someone with little
previous expertise in formal methods to verify a non trivial microprocessor in a limited timescale This is not to belittle

Graham's achievement the production of this proof work ing as Graham did from the previous literature goes well beyond a typical MSc project The achievement is that with this exposition to hand an engineer tackling the verification of similar microprocessor designs will have a clear view of the milestones that must be passed on the way and of the methods to be applied to achieve them
